

Title :- Language distinguishes human from other animals

Human's scientific name is *Homo sapiens* because he thinks. Some ^{other author} think, due to maker of tools. But near author human is talker that's why he is thinker and maker of tool. Other lower creature also have instinct but do not possess language. It was language that made possible to gather knowledge, religious insight, law, ethics and create human civilization.

The official name of our species is Homo Sapiens; but there are many anthropologists who prefer to think of man as Homo Faber — the smith, the maker of tools. It would be possible, I think, to reconcile these two definitions in a third. If man is a

knower and an efficient doer, it is only because he is also a talker. In order to be Faber and Sapien, Homo must first be loquax, the loquacious one. Without language we should merely be hairless chimpanzees. Indeed we should be something much worse. Possessed of a high IQ but no language, we should be like the Yahoos of Gulliver's Travels — creatures too clever to be guided by instinct, too self-centered to live in a state of animal grace, and, therefore, condemned forever, frustrated and malignant, between contented ape-hood and aspiring humanity. It was language that made possible the accumulation of knowledge and the broadcasting of information. It was language that permitted the expression of religious insight, the formulation of ethical ideals and the codification of laws. It was language, in a word, that turned us into human beings and gave birth to civilization.
