

ENGLISH ESSAY

People have become Overly dependent on technology.

OUTLINE:

➔ Introduction

➔ Communication has been made easier

➔ Transport has also been enhanced with

The advancement of technology

➔ Production will be increased with

The help of technology

➔ Modes of Education has improved

➔ Technology advancements in Healthcare.

➔ Bilateral Trade has been increased because

of Technology.

➔ Freedom of speech has been more adequate

➔ Reliance on technology is essential in

this 21st Century digital age. Like buying and selling

➔ Statistical Overview of Dependence of

Technology

➔ Effects of Technology On How we
Research

➔ Time will be safe because of Technology

➔ Technology leads to impatience

➔ People are Addicted to the technology

➔ Skills are to be replaced

➔ Finding the balance of technology

➔ Conclusion

Technology has helped transform the world positively. According to Gines 2010, there has been a consistent technology advancement in various sectors and this has affected the way things are done. The need to make work easier has driven man to become more advanced that can help transform way of life.

53

People have overly dependent on technology because communication is much faster than ever then before. Before the advancement of technology people wait months to months to receive one message but because of technology people communicate in a minute with each other.

"The great myth of our times is that technology is communication" (Libby Larsen)

Transport is enhanced with the advancement of technology like Air routes, roads, sea routes. They all are consistent development of modern transport machines. This has redefined the movement of people on earth. In large companies, most of the physical works are currently done using large machines, the machines are faster, more accurate, lesser fatigued and can standardize production better than human beings. This means that in such plants, the work

human being is simply to control the machines. In the firm, it is the machine responsible for most of the physical activities that are previously done by human being. Bereno in 2009 said that there is no sector that is currently running without the direct support of the machines.

Production will be increased with the help of technology. It is true that the world has become under intense pressure to embrace speed, perfection and efficiency in operations. The need for speed has been necessitated by the pressure firms are under when it comes to producing new products in the market. There are various firms in the market that are always waiting to mimic innovative products of other firms. This has forced innovative firms to have high speeds when it comes to delivering their products in the market in order to get maximum benefit by the time other firms will introduce their products in the market. When the product is delivered in the market within a short time period it is possible to price it at a lower cost.

Quality comes not from inspection but from improvement of the production process (w. Edwards Deming)

Today People is dependent on ~~education~~ technology because of education. Because of Internet education is much easier than before. Online education removes barrier for seeking knowledge. People share their ideas globally and connect with people from all over the world. This has allowed for new and innovative ways of teaching and learning to take place. One of the most notable changes brought about by technology is the increased use of collaborative learning. Collaborative learning is a teaching and learning strategy that encourages students to work together to achieve a common goal. So people more rely on technology. Education is the most powerful weapon which you can use to change the world.

"Nelson Mandela".

People rely on technology because in the past health care facilities are not properly available. People often use home remedies but as the time pass ~~advancement~~ technology make a life easier for people. Scientific changes and technological changes advancements have made many important changes throughout history. The use of machines to analyze and

and get on medical data, usually with the goal of predicting a particular outcome. Artificial intelligence healthcare is the use of machine learning, natural language processing, deep learning and other AI-enabled tools to assist and ideally improve the patient experience including diagnosis, treatment and outcome. Although physical involvement are less day by day but through technology results are more accurate and efficient. Health care is yet to be transformed by technology.

(Joshna kuhner)

Bilateral trade has been increased because of technology so that people are more dependent on technology. When the expansion of market for a country's good through concerted negotiation between two countries, relationships are good between the countries with the help of technology advancement like all the systems were computerised it takes seconds data for data saving and dispatch the order within some specified period. In the past time it takes months to or years in exchanging of goods worldwide.

Any sufficiently advanced technology is equivalent to magic

Arthur clark

In the past people here did not know about the Freedom of speech is a key site for as media companies repeatedly attempt to expand intellectual property rights at the expense of individual free expression while simultaneously invoking freedom of expression to oppose telecommunication regulation. Freedom of speech leads to know about the rights. People speaks for their rights in social media so people more rely on technology. It is mandatory for the today's period.

It is easy to believe in freedom of speech for those with whom we agree. Reliance on technology is essential in this 21st century because people preferred buying and selling in just one click. In the old time people travelled for month to buy or sell something. Today it is more convenient to people so that's way people more rely on advanced technology.

81% of global population is addicted to the internet, and 85% of American adults can't go a day without using it. This shows how dependent people have become on technology.

7

This statistics matter because it demonstrates how reliable people have become on technology, and how it has become a part of every day life 40% of users admit to using their phones a lot, indicating a lack of awareness of their surroundings. 71% of teenagers who spend 5 hours on electronic devices are at risk of suicide highlighting the potential dangers of technology. 95 million jobs could be created through the mass adaption of mobile banking technologies. 81% of college students believe digital learning technology improved their grades. So people are more reliance on technology.

Reliance on technology means people are more addicted to the technology and it leads to impatience and it indicates a lack of awareness of their surrounding. So due to electronic devices suicide risk highlighting the potential of dangers. They have a negative impact on their physical and mental health as well as their social interactions. It shows how technology can be both a blessing and a technology curse as it can

8

provide great benefits but also
lead to an unhealthy reliance on it.

Although Technology is a
powerful tool that can be used
to solve and improve our lives
but it can also be used to
create a dependency that can have
negative consequences. It is also
important to remember that
technology should be used in
moderation and that it should
not be relied upon as a crutch.
By being mindful of our
technology use and making sure
to take breaks from it we
can ensure that technology does not
become a hindrance in our lives.
