

# Climate change is making lives miserable

Date 03.06.2023

## Outline:

### 1: Introduction:

2: Defining the key term climate change

3: Understanding how climate change is making lives miserable

3.1, Excessive heating of globe is making livelihoods of inhabitants challenging.

3.2, Climate change is incurring heavy economic losses by causing natural disasters.

- key case of massive floods of 2022 in Pakistan

3.3, Rise in sea levels due to torrential rains caused by climate change have risked human life

- key case of Thatta district

3.4, Unpleasant climate has resulted in extinction of animal species

- key case of extinction of black turtles

3.5, Coming of extreme winters have disturbed the working

condition of masses.

-key case of advent of extreme winters in Europe

3.6, Emission of green house gases is weakening of ozone layer making arrival of deadly diseases inevitable

-key case of skin cancer

3.7, Rapid migrations are taking place forcing humans to leave their everything behind.

4: Understanding why climate change has become so a prominent problem for the globe

4.1, Reliance on non-renewable energy sources has contributed the most.

4.2, Growing industrialization trends emitting green house gases.

4.3, Failure of humans to build resilient infrastructure.

4.4, Unawareness of masses of the deadly climate change impacts.

4.5, massive deforestation

5: Policy prescriptions to overcome the drastic impacts of climate change.

Date 03.06.2023

5.1, Forming and implementation  
of electric vehicles (e.v)  
policies domestically and  
internationally

5.2, Massive tree plantation drives  
around the world  
-key case of ten billion tree  
tsunami programme

5.3, Enhancing climate preparedness  
and capabilities of  
natural disasters management  
authorities

6, Conclusion:
