

Environmental Impact of water wastage

Topic sentence: Water wastage has significant environmental impacts and can affect both local ecosystems and global water resources.

Explanatory sentence: Reduce water flow due to wastage can disrupt the natural balance of rivers, lakes, and wetlands, affecting fish populations, aquatic plants, and other organisms.

Example: Those areas of the world that are short of water, if we continue to waste water by using more, the result will be that these areas will become completely useless.

Evidence: Water is essential for the survival of all living things, which means that if water runs out, nothing will survive.

Conclusion: This means that, due to water wastage, our environmental system can be affected badly and even our life on this earth can become impossible.
