Paragraphs on Artificial Intelligence

The Benefits of A.I in education.

Artificial Intelligence has taken the world by storm concerning its education facilities. Artificial Intelligence fosters curiosity in children to learn with visual examples, games, and stimulation, and by providing instant answers to the given questions, making an ease for students to improve their skills and knowledge. It is also a good source of extra support and cost-saving guidance outside the classroom, where a student can easily access it and can reduce the level of frustration about the difficult topic ^{he cannot understand}. UNESCO is committed to supporting Artificial-Intelligence technologies for achieving 2030 Educational agenda while ensuring ^{the core principles of} equity and inclusion. Hence, Artificial Intelligence is profitable for educational fields.

The threat of AI to education.

Although Artificial-Intelligence is meant to facilitate humans in terms of education, its over-dependence is a threat that can not be disregarded. The educators are using chat GTP- the tool of A.I, to solve their homework, writing Artificial-Intelligence

generated essays, and maths problems instead of solving them on their own. Teachers have caught students cheating on the paper using ChatGPT and they are afraid - ~~that~~ ^{this} might bring loss to students' learning. For instance, "Students should be encouraged to develop their ideas and think critically instead of copy-paste from A.I generated essays" says John Smith, professor at California University (Nojcek, times of malta.com, Feb 2023). Thus, experts are raising concerns ~~on~~ ^{about the} over-dependence of students on Artificial intelligence.
