

DATE: ___/___/___ Essay

How is Artificial Intelligence Transforming the world?

Outlines

1. Introduction

Thesis Statement: Artificial Intelligence (AI) having resounding merits which is revolutionizing the field of medicine, economic, education, transportation etc., but on the other-hand it can be used in criminal activities.

2. How Artificial Intelligence is Transforming the world

a Artificial Intelligence changing personal life experiences;

(i) Alexa revolutionizing household experiences

(ii) AI helping humans in making better choices

b Artificial Intelligence transforming medical Sector;

(i) Telepathic doctors

(ii) AI helping in better assessment of patients

(iii) AI revolutionizing the battle against pathogens

c Economic sector is altered for good;

DATE: ___/___/___

- (i) AI enabled marketing
- (ii) Data enabled business catering the needs of customer

d Transforming educational sector;

- (i) Individual based learning
- (ii) Helping teachers in better assessment of students.

e Revolutionizing transportations;

- (i) Self-driving vehicles
- (ii) Improving fuel efficiency

f Devise better strategies to counter climate change

g Changing nature of jobs for human beings

3 Fears Associated with Artificial Intelligence

a Invasion of privacy and exploitation of information

b Loss of certain jobs

c Fear of overpowering humans

d Creation of built-in biased alog algorithms

e Accelerated hacking and terrorism

4. Conclusion

How is Artificial Intelligence Transforming the World?

It would be an understatement to say Artificial Intelligence (AI) has taken the world by a storm. The conceptual framework of AI is to make intelligent machines which can take decision on their own without human intervention or input. All the major tech-giants such as Google, Facebook, Amazon, etc, are putting billion dollars on the AI usages, for they believe it is the future of the world. AI has been revolutionizing the world through its astounding features. House assistants, such as Alexa, are changing traditional household experiences. Not limited to this, AI is revolutionizing medical sector, its applications are helping in better diagnosis of patients and their pathogens. Similarly, AI has been revolutionizing the economic sector, helps companies for sale increase and consumer retention. Besides that it has changed the educational pattern, encouraging individual based learning and helps teachers to assess students in a better way. The most amazing revolution of AI is in transportation introducing self-drive vehicles. Seemingly, AI devise better

Strategies to counter climate change.
With all these amazing merits AI has some serious demerits or fears associated to it. The biggest fear is the idea that AI is going to overrule human beings. It can be used for criminal activities such as exploitation of information, money laundering, terror financing and loss of jobs. These fears can be relayed if the humanity is to make the most of it.
