Body Paragraph

Outline Subheading: Concentration of green house gases in the atmosphere.

Topic Sentence: The concentration of green house gases is increasing in the atmosphere day by day.

Reason: It is mostly due to the advancements in industrialization.

Supporting Point: Since the beginning of the industrial era, human activities have been the major cause of increase of concentrations of carbon dioxide and other greenhouse gases.

Evidence/Example: Worldwide, net emissions of greenhouse gases from human activities increased by 43 percent from 1990 to 2015. Emissions of carbon dioxide, which account for about three-fourths of total emissions, increased by 51 percent over this period (Reference: Climate Change Indicators: Greenhouse Gases, US Environmental Protection Agency).

Concluding Sentence: This means that human activities are causing the climate to

change drastically as due to the emission of greenhouse gases, the temperature is increasing day by day.
