Pakistan Affairs:

Part 2

Q3:

Pakistan is currently 5th most populous country in the world. Our population is increasing day by day which is quite alarming situation. Increased population has been a serious issue in Pakistan from past few decades. On the one hand, whole world is concerned about higher rate of birth and population, unfortunately

this issue did not
get much attention
as it should get.

There are few
reasons about this
immense rate in
Population in Pakistan.

People are not
aware about this
issue. They don't know
how this can affect
their family system
and society as well.

Fertility rate is
increased in recent
past decades in
Pakistan. Due to this
increased birth rate
, Population has also
increased. This increase
in birth rate is
due to better
medical facilitation.

Illiteracy rate in Pakistan is quite evident. This illiteracy is also one of reasons.

Mortality rate is also decreased in Pakistan as compared to past.

One of the main concerns of this increased rate in population is depletion on natural resources.

Because now the consumers and uses of these resources are continuously increasing, it is creating a harm to these natural resources.

For example, different societies and

houses are being made by cutting trees and plants.

For betterment of infrastructure, highways and roads are being built in the places of these trees.

Traffic is also increased and more traffic is also making our environment more polluted and creating harm to Ozone layer which is a natural resource protecting us from disecting rays of Sun.

Increase in population, is also increase in food, increase in other things of daily

routine while we
are not growing more
agricultural products
causing depletion of
already existed crops

Steps have to be
taken on national
and individual level
as well to control
population and maintain
natural resources

Contraceptives
measures should be
preferred.

town planning
must be made more
effective.

Awareness campaign
must run from
door to door for
making people aware
of population issues.

To maintain natural resources, steps and their implementation is strictly needed to be held.

We must grow more trees, more plants instead of consuming previous ones.

Traffic causing harms to our environment must be banned. Public transport should be preferred.

Q4.

Pakistan from the very start of its independence is facing issues. Economic instability is one major issues faced by Pakistan since start.

1960-1965 was one of the best era's in history of Pakistan in all fields. Our economy also well grewed during this time period.

Unfortunately, such evident growth in Pakistan's economy is rare in other times.

At the current scenario, Pakistan is standing on verge of default while some

Sources and Federal
Minister of Pakistan
Khuram Azim claimed
that Pakistan is
technically defaulted.

Different efforts
are being made to
save Pakistan from
this huge economic
crisis which seem
effective only temporarily.

Whenever such
sudden economic crisis
happens in Pakistan,
Government is rarely
prepared for these
emergency situation to
tackle down. In spite,
we are more dependent
on other resource i.e IMF
which helps but on
stricts terms and
regulations to follow.

These are various factors involved in economic crisis in Pakistan.

Political instability is quite evident in history of Pakistan. Not a single Prime Minister could complete his/her tenure of 5 years in Government. So they don't get chance to implement their economic policies. If we see on the Global chart, Russia and China are the examples where a single leader had chance of leading country for many years and made their country prosper.

i.e. Vladimir Putin
and Xi Jinping.

The fear of
dictatorship had also
become a issue. Anytime
a leader selected
by public, wanted
to do something
betterment for common
people, either dethroned
or been deported in
Pakistan.

Making economic
policies and implementing
them are a different
scenarios. Pakistan
government made policies
but when the times
of implementation
comes, they are unable
to do so.

Depending upon
boards or other institutions

like IMF, World Bank, Asian Development Bank and Islamic bank caused a negative impact on Pakistan's economy.

Our Government and policy makers need to do some hard work in this field. Rather dependant upon others in emergency, we ourselves must be able to handle so such emergency situation could not happen in future.

Q6:

US military intervened in Afghanistan with purpose of operation Enduring Freedom (OEF) as a result of 9/11 incident.

They entered in Afghanistan with more than hundred thousand troops.

They took all the modern technology i.e. garrilla's, drones and Black Hawk with them.

They were also aided by other Nato countries as well as it is written in NATO chart article 5:

"Attack on a

Single NATO member
would be considered
attack on all NATO
members"

It was one of
the longest wars
fought by USA consisting
of 2 decades.

It was one of
the most expensive
wars of the history
As US spent 6
Trillion Dollars and
1.8 Trillion Dollars
only in ~~Paris~~ Afghanistan.

USA made some
blunders which
resulted in their
failure and disturbance
to the peace of this
region.

During this war
they also intervened

in Iraq and their
concentration got
divided between these
two As a result
Taliban got power in
some regions.

They antagonized
Pakistan by giving
more powers to
Non Pashtuns. Pakistan
had major investment
in Pashtun's

They gave more
space to India and
broke promises with
Pakistan.

Other major countries
of region, RUSSIA,
CHINA were not on
the same page with
USA on this war.

This was led by USA had a major impact on region specially of Pakistan our foreign relations were shattered with Afghanistan.

Many of our innocent people were killed upto 70k by attacks.

Terrorists invaded in Pakistan.

Pakistan had to face huge economic loss in this war.

Peace of our country was highly disturbed.

Other countries, Russia and China had also issues relevant to their

sovereignty so the
terrorists or Taliban
may not invade in
their countries.

US is evacuated
from Afghanistan but
we are still facing
consequences of that
war.
