"Different Aspects of Culture"

Culture has two side, an external side and inner ideological side. External side of culture is the depiction of its inner side. Culture is affected when these two sides are ~~influenced~~ disturbed. So cultural problems should not be studied seperately, but either they should be studied by the problems that influence it.

Culture is also affected by the influence of external people and by thier rule. They kept the people backward and their growth was prohibited. Cultural development was stopped until the freedom from foriegn invaders. Ancient culture was only restricted to the high class feudals and other citizens were deprived of it. These feudals and tribal people were engaged in many social conflicts. The foriegn invaders benefited from these conflicts. In this way culture was transfered from the former

powerful people to the backward class.
