

### Subheading: People's privacy is affected due to AI

People's privacy is affected due to AI People's privacy is affected out and out due to Artificial Intelligence (AI) in the world. It means that they have many an issue in keeping their activities hidden. In these days, there are several online means available to the governments of the countries to watch the actions of their citizens. As a result, the latter's privacy is compromised. For example, the government of China monitors the behavior of its people by using an AI programme called the Social Credit System (Usama Asgar, 'AI in democracy', March 2023). In this way, people are hard to maintain privacy due to AI.
