Artificial intelligence (AI) has created ease in communication. The reason is that people across the world do not have to rely on translators for conveying their message to those who do not understand their language. Presently, there are several apps that can change the language of their message into the one that is understood by their receivers. For example, Papercup is an app that people can use to convert their text into other languages so that their receivers can understand what they say (Imran Batada, 'AI that works for all', February 2023). Given all that, due to AI people belonging to different parts of the world can communicate with one another with great ease.
