

Topic: Can online education totally replace traditional education.

1- Introduction

Thesis statement

Both online and traditional form of education are effective ways to impart knowledge among students. The online education is more demanding because of more developed and modernized world. Traditional education can be replaced by online education in order to get more benefits.

2- Advantage of online education

- a. Distance education infra
- b. No time limit and physical structure involved.
- c. More relax way of getting education.
- d. More advanced mode of education.

3. Online education replace traditional education, but it is not always.

- a. Required additional training from instructor.
- b. Required self discipline
- c. May create sense of isolation.
- d. Online classes are prone to technical issues.

4- Synthesis:

- a. Mostly teacher teaches through different websites.
- b. Students can manage their routine
- c. Online presentations and class room discussion minimize sense of isolation
- d. By solving technical issues one can get command in IT.

5- Conclusion:-

Topic:- Can online education totally replace traditional education.

1- Introduction

Thesis statement

Both online and traditional form of education are effective ways to impart knowledge among students. The online education is more demanding because of more developed and modernized world. Traditional education can be replaced by online education in order to get more benefits.

5. Conclusion:-

As technology advances, education through internet is embraced by the society. Online education is now available in some countries. This method of education provide education taught by lecture and students can access via internet. Some people think that online education will not be able to replace the role of traditional education which exist since long time ago. In traditional education form students can gain knowledge in the territory of school. Students are bound to come to school, attend the classes, while online form of education needs no physical infrastructure of school, learning can take place through online mode.

Both online and traditional ways are effective in to impart knowledge among students. The ^{adv} online education is more ~~is~~ demanding because of developed and modernized world. Traditional education ~~is~~ can be replaced by online education in order to get more benefits. Firstly, Online education is distance education, in which student do not need to go to the institution. It can take place every where while sitting in home/office etc. It has ^{scored} high on the flexibility for students. Remote access to this online education is possible through smart phones, laptops, and there is also a requirement of high speed internet for online classes.

Online education has advantage over traditional form of education that it can access to everyone. As students not need to visit the institution. So everyone who wants to get admission can take online classes and continue his/her study. As the education is online, student sitting in one part of country is able to attend online class which is conducted to the other part of the country.

→ Secondly, In online mood of education, there is no limit of time and physical infrastructure. Teacher/ Instructor can arrange online class at anytime on the basis of availability of his/herself and the student also. As in traditional form of education, where students have to visit the institution where a proper time is fixed for particular class and after that time period the class will automatically ended. But in online mood teacher can arrange class irrespective of time, when he/she will get free he will able to start the class. So people feel good while attending online class as it is free of time constraints. Similarly in traditional form of education, where student visit the campus, so there's the expense of building, electricity charges etc. No such expenses is considered for online mood.

→ Thirdly, Online education is more relax way of getting education, because in this mood

no direct contact between the teacher and the students not occur. student feel free to take education. while in traditional form of education student can encounter with the teacher as well as the students in the classroom so he might get nervousness while speaking, delivering the answer. Students feel some type of distress while taking traditional form of education. In online mood, students are usually free from this type of stress and they can get education easily.

→ Firstly, while taking online classes, students have the chance to improve his/her IT skills. As this is the age of computer and while attending classes on computer, smart phones etc, student can get not only academic knowledge but also learn the information technology use in modern life. As it is the age of computer, when instructor deliver (program in her) lesson online, by using IT skills, student also show great interest in IT. while in traditional class sometime student learn traditionally, visit the school, attend the class where teacher mostly used textbook for lecture delivery so students sometime feel bored due to traditional form of education.

Some people believe that while taking education online, one needs to additional

additional training from instructor, because according to that, as instructor is not in direct contact with the learner, so learner are not able to learn or seek knowledge properly and they need more assistance from instructor in order to fully grasp the knowledge. so learners ^{needs to} conduct additional classes.

Some people have point of view that in online education as classes are conducted online and students can attend these classes every where, they do not need to prepare themselves while attending the class so they ~~must~~ ^{need} to become more self-disciplined. In traditional form of education, the time is mostly fixed,

The institutions have fixed time for classes so students can easily follow that time. but in online mood as time is not fix for the class so students need to become self-disciplined so that they can easily attend the class whenever conducted by the instructors.

Another believe about the support of traditional form of education is that, the online education may create the sense of isolation.

As students are mostly sitting alone while taking classes, mostly they do not participate in the class as compared to the traditional form where teacher involves students through different activities, while such activities are not be possible in online mood so students mostly feel sense of isolation. students have no direct contact with the teacher nor with the class fellows so they mostly feel themselves isolated in online mood of class.

In addition, some people have believe that mostly online classes are prone to technical issues. Sometime students ~~for~~ encounter the problems of internet. If for some reason, internet is not available then students can't be able to attend the class. Or as these classes are conducted through internet so ~~to~~ students need smart phones, computer, laptops to attend the online classes. In the absence of electronic devices one can not be able to take online class. While in traditional form of education, students are mostly from these constraints.

There are some other views that defend the use of online classes.

Firstly, In online mood, teacher is not restricted to give knowledge from particular book but he is free to give knowledge to the students. So mostly teachers teaches through different website while covering a single topic. That's why students can get more and more knowledge as compared to traditional form of education. where's students have to follow just course book content. Here students and teachers are free. Students can take help from any website through internet, therefore this can enhance their knowledge and clear their concepts.

Secondly, students in online class can easily manage their routine because they take classes in home, office etc where they can easily attend. so in this way

Students can easily manage their routine. Another view about online mode of education is that teacher can involve student in class through different activities like arranging presentation, class room discussion etc. Through these activities students can directly contacted with the teachers and the class fellows also and so sense of isolation minimized.

In traditional mode of teaching, sometime the active students participate in classroom activities while mostly the dull students remain silent. Therefore they become confused, hesitant. While in online mode teacher can involve each student through different way, by class discussion, presentation. Student can easily get confidence while speaking.

Finally, Online education is the need of the hour to the modern world. As it offer more flexibility. Students can take courses at their own pace and can often choose when and where they study. It allows them to take control of their own learning process. They can go through the content, re-read chapters, listen to audio-books or take help from external links. This helps them undertake courses as per their learning capacity and convenience.
