### Energy crisis in Pakistan

Energy crisis is an urgent and burning issue of Pakistan in the contemporary scenario. Pakistan, despite enormous other prevalent problems, is being faced with huge shortage of energy. According to Economic Survey of Pakistan, the country is lacking 2,000 megawatt electricity per annum, which is alarming to the smooth running and stability of the state. 15% to 20% of Pakistan's total electricity is blown off as a result of poor transmission and distribution lines.

Pakistan will, as a nation, come across electric bankruptcy in the shortest future if an instrumental strategy is not adopted to overcome
