Overcoming rapid climate change as a challenge for mankind.

• Thesis statement:

- Natural disasters are rapid climate change which the biggest challenge for mankind to overcome it.
- The natural disasters like excessive rain caused reduction in yields of various seasonal crops all over world. These rapid climate change should be monitored carefully and people should be made aware of it's dire consequences.
- According to Hindustantimes.com, Heavy rainfall across states has pushed back harvesting and damaged ripened summer-sown crops, such as rice, soya bean and pulses, which could stoke food prices.
- The prices of crops or its shortage could cause catastrophic consequences in community, that's why it's very important to monitor and overcome such rapid climate changes.
