8. Conclusion

Same points

Introduction :

The danger of extremism and terrorism is more prevalent than ever before ; but through technology and innovation, there is a greater chance to turn the tide tide in this fight. In fact, the most developed countries of the world have made an enormous growth int in terms of technology and innovation.

Therefore, it is utmost necessary for any country of the world to make technology and innovation as integral part of their life-style. Similarly, there is an inverse relationship between the two sides, that is if a country promotes technology and innovation, automatically extremism and terrorism will decreases and vice versa. Additionally, technology plays an important role in countering extremism and terrorism, such as effective usage of technology can improve relationship between hostile countries ; terrorists hideouts can be easily identified; and there will be more employment and peace. Moreover, innovation also has a great part in eradicating extremism and terrorism, like extremist ideas can be extirpated through innovative thinking ; innovation brings harmony and love in the society ; and innovation promotes flexible thinking which is against extremism and terrorism. However, there are some challenges associated in countering extremism and terrorism, for instance hostility between countries of the world
