Rise of Middle class
Emergence of Middle class
Life of Middle class -

During the 19 century, middle class was not considered as the part of upper class society. The members of upper class society only recognized by family terms only not even by some professions. Hence middle class ~~to~~ family makes a society ~~for~~ itself with certain behaviours. This class has its own convention, behaviours patterns, more concerned towards the poor. This class was so respectful class as helping hands for poor. In this class the divergence of opinion were also respectful while the ill-mannered had no respect in this society.
