

Pakistan is a state having rich weather. It's weather includes all four seasons. Pakistan is also a mineral rich state. Due to this, Pakistan has great importance at international level. These minerals are distributed unevenly throughout the Earth. There are some states which exist on barren land. Pakistan has large deposits of precious metals. Economic giants like China want to invest in Pakistan to get profit from its resources. These investments can create job opportunities for people of Pakistan. These minerals include copper, gold, iron, gypsum, chromite, marble and coal. These minerals contribute large to the economy. Unfortunately, Pakistan is unable to utilize its natural resources properly. If natural resources are utilized wisely, Pakistan can be an economic giant.
