

Artificial intelligence has overstepped its bounds

Outline

1- Introduction

Thesis statement: Certainly, AI has worked under its bounds. Unfortunately, it has been accused of crossing its bounds by some critiques. However, provided evidences do not agree to them. Hence, this shows that artificial intelligence has not overstepped its bounds.

2- Generation of Artificial Intelligence: An overview

3- Artificial Intelligence has not overstepped its bounds (Thesis)

- a) AI has facilitated students in receiving quality of education
- b) AI has improved a man's decision-making skill
- c) Public trust has increased due to AI usage in journalism
- d) Cyber awareness has been increased due to AI
- e) AI has played a role in improving economy of countries

4- Artificial Intelligence has overstepped its bounds (Antithesis)

- a) Students' dependency on AI has curtailed their creativity

- b) AI is also a source of harmful war-leading decision skills
- c) Plausible information in journalism is also a threat of AI
- d) Cyber security impeachment has become a negative outcome
- e) AI has replaced manual works. A threat to human survival

5- Artificial Intelligence has still stepped in its bounds (Synthesis)

- a) AI has directed students in creative learning
- b) AI has not promoted warfare techniques, but a man
- c) Positive use of AI has made journalism reliable
- d) AI has a strong cyber security despite accusation
- e) AI has assisted a man in labour force

6- Conclusion

Paragraph

Growing population is a root cause of water crisis

Growing population is a root cause of water crisis in Pakistan. No doubt, Pakistan has become the most populated country in the world that is a serious problem regarding water scarcity. This growing population has resulted water shortage in Pakistan. As per the IMF report, "Pakistan has become the third most water scarce country" (The International Monetary Fund, 2023). This is an evidence that growing population is a root cause of water crisis.

Overuse and misuse of ground water leads to water crisis

Along with growing population, overuse and misuse of ground water also leads to water crisis. Pakistan, unfortunately, wastes its much water due to overuse and misuse of it. As a consequence, a significant amount of water has been wasted every year. "About 26 million acre feet of water is wasting in Pakistan due to overuse and misuse of it." (The Pakistan Bureau of Statistics, 2022). Hence, it is a proven fact that overuse and misuse of ground water also leads to water crisis in Pakistan.

Public trust has increased due to AI usage in journalism

Artificial intelligence usage in journalism has increased public trust. No doubt, AI has also assisted journalists in making good information. This, as a result, has gained public trust believing in good information. As per claim of American analysts, "People are getting more attraction towards journalism that has been led by AI." (American analysts, 2023). This is a proven fact that public trust has increased due to AI usage in journalism.

Plausible information in journalism is also a threat of AI

Additionally, plausible information in journalism is also a threat of AI. Unfortunately, AI has ^{been} leading to generation of plausible information since its innovation. Journalists have become dependent on AI to create public-interest led information just for the sake of their promotion. Similarly, as per claim of American analysts, "AI usage has become beyond its fact that can be seen in plausible journalism." (American analysts, 2023). This is how AI has posed threat of plausible information in journalism.
