Topic: MR Robot Takes on Law  
& Order.

Globally, artificial intelligence (AI) is transforming various sectors and industries, including the digital realm, knowledge, economy and the development of smart cities. Pakistan is also experiencing the impact of AI, with significant advancement in this technology.

The legal sector of Pakistan is particularly interested in exploring the use of AI to improve efficiency, accuracy and fairness of legal proceedings.

New technologies, including AI, are affecting our daily lives activities. From the DonotPay lawyer mobile app, robot Judges evaluating small claims in Estonia to robot mediators in Canada and artificial intelligence Judges in China and Malaysia, and to a Pakistani Judge getting help from a chatbot to decide a case, this landmark technology is now responsible for growing number of decisions by Judges. In addition, Judge Muhammad Munir who presides over a court-

in the Mandi Bahaudin district of Pakistan sought the help of Chat GPT to ask legal questions about the case and whether a juvenile accused of a criminal offence could be entitled to post-arrest bail. However, legal experts have cautioned that the judiciary must proceed cautiously towards automation. They assert that the court system in Pakistan is still developing and there'll be several ethical, legal and societal ramifications of using AI that should be taken into account. Furthermore, their assertions carry weight as it is no less than a universal truth that technology has a dark side too. Although it's fascinating to see how AI can be productive in the Justice sector for long terms. As said by Allama Iqbal in "Bang-e-Dra" (The call of the Marching Bell).

آنکو جو دیکھو دیکھتی ہے، لب پہ آستانیں -  
عمر حیرت یوں کہ دنیا لیا ہے لیا ہو جائے -  
(علامہ اقبال)

(verse of his poem "shama Aur shayari" (The Candle and the poet))

It can be translated as "Whatever the eye is seeing cannot be described

by the lips. I'm lost in amazement  
as to what the world will become!"  
And, no doubt, AI has indeed revolutionized  
the world we are living in.

Notwithstanding these drawbacks,  
we must not shy away from giving  
the use of AI in the Justice  
sector serious consideration. As famous  
Canadian poet, Leonard Cohen, has said,  
"Every thing has a crack in it; that's  
how the light gets in".
