

The climate is changing, So should we!

## Outline

### 1- Introduction

**Thesis statement:** No doubt, we should also change ourselves with the changing of climate. However, some critiques also argue against it, but the given evidences do not agree to the logic. Therefore, the climate is changing, so should we as well.

### 2- A bird's eyeriew of the natural environmental stewardship

### 3- We should also change with the climate changing (Thesis)

- a) Forestation should be preserved
- b) Massive industrialization should be controlled
- c) Burning of fossil fuels should be sanctioned
- d) Rampant urbanization should be curtailed
- e) Population explosion should be discouraged

### 4- We should not change ourselves with the climate changing (Anti-thesis)

- a) Reforestation can meet with the loss of deforestation
- b) Industrialization is the source of human survival

- c) Renewable energy generation has potential over fossil fuel loss
- d) Urbanization is a wheel of economic tyre
- e) Population explosion has worldwide benefits

5- The climate is changing, so we should still have need to change ourselves (Synthesis)

- a) Awareness campaign on preserving natural forestation should be promoted
- b) Industrialization should also has certain limitations
- c) Renewable, clean energy generation is slow and weak
- d) Sustainable urbanization is a source of economic development
- e) Population explosion has put the world into troubles

6- Conclusion
