

Outline

Globalization is beneficial for Developed countries or Developing Countries.

1. Introduction

Globalization is beneficial to both developed and developing countries. It is more beneficial for developed countries due to availability of more export markets and security of energy. High per capita income and a strong economy attract all innovations first to developed countries.

2. Correlation between globalization and development.

3. Globalization is beneficial for developed countries (Thesis)

- Developed countries have full access to market results high export
- FDI opportunities are high in developed countries.
- People of developed countries have full access to market because of affordability
- High destination of people to the developed countries
- Infrastructure development and Global connectivity.

4. Globalization is beneficial for developing countries (Antithesis)

- Developing countries have full access because of low tax and cheap labour
- FDI is high in developing countries because of high demand and profit
- More purchasers, high demand, low production cost, high profit
- Low destination because of strict visa policy and high exchange rate
- For low exchange rate, high infrastructure development in developing countries

5. Even Being Closely Linked, Globalization is beneficial more

to developed countries than developing countries. (Synthesis)

- a. High per capita attracts all markets to developed countries
 - b. More energy & money security attracts FDI to developed countries
 - c. High life standards and low austerity measures markets toward it.
 - d. Talented people have faced no strict visa policy or money problem.
 - e. Low new infrastructure development than the whole favored business.
6. Conclusion.
