

Topic

Ai Overstepped it bounds

Out line:

1 Introduction

Thesis Statment: The change in war, surveillance and several aspects of peace and security are associated with Artificial intelligence.

Thesis statement is unclear

2 Overview of artificial intelligence development and its ground.

3 How Ai overstepped it bounds.

3.1 chat bots replaced humans natural interaction with artificial text tools.

3.2 Destroyed human habitat through ready made information.

3.3 Strengthened deep fake news

3.4 control in weapons

3.5 Ai being developed by own-self

4 However the partive applications of the Ai help in countinued growth

4.1 Enhence envirmenatal protection through developing in distinc sectors

4.2 Enhence economic growth

4.3 Facilitate deprived communities

5 The growth of Ai will be counti-
nued in future. How too keep
it check

5.1 conducting ethical training and
instruction course in universities

5.2 keeping of eagle eye on Ai
developess and misusers

6 CONCLUSION

Too much spelling mistakes

In the track of development the humans are invented several tools for sake of ease and facilities. The artificial intelligence is either a tool by technology. The change in war, surveillance and several aspects of peace and security are linked with Artificial intelligence (AI). The unpredictable advancement of AI is stimulated the wave of seas dread, a threat for humanity. AI sends soaring facilities along with dangerous harms. After introducing a chatGPT at 2018, they AI is soaring rapidly as simulating humans brain and compiling data. The CEO of AI ~~SAM~~ Sam Altman stated vesily the AI is concerned with both positive and negative aspects. While meeting he either elaborated the invention of printing press as example. The invention of printing press is evoked revolution in world. At it

(4)

initial phase it was suffering from various disputes such as a lost of jobs and many others.

Before invention of printing press the masses write books by hand with ink pen ^{at} minimum three to four months. At other side the press prints four hundred books in a day. Ai is also connected with severe factors of violations, including deep fake news, Algorithmic bias and privacy invasion. However the potential economic growth considered one of blessing of Ai. The future of world is bounded with Ai.

Artificial intelligence (Ai) was emerged concept of by scientists of physics and maths. It founded by and observed first time during workshop at Heath Mowth university at 1985. The Ai is tool of technology, which gradually developed, but the open chat GPT considers revolutionary agent

5

in the world of technology. AI has bestowed many facilities on humans including 24/7 availability, reduction of human errors, appropriately skilled and several others. AI played a crucial role in enhancement of economic developments by strengthening the gross domestic product (GDP) of a country. According to a study by the University of Cambridge, the generative AI has the potential to significantly impact on strategic and political communications, highlighting the need for ethical considerations and regulatory measures.

The social domains are affected in account of the emergence of AI. AI hinders the direct natural conversation with their loved ones. In a modern era, chatbots have made meaningful interactions. A junior never needs to consult and suggestions regarding

6

any unawareness, they simply ask from chat bot. The Ai leading towards deteriorations.

communications.

which enforced ~~stop~~ serious impacts on life.
↓
human.

They men remains activity since ancient time for searching truth. He made untired efforts to carry out research, that not only nurished the research activities either. it yendas appropriate information. The development of chat GPT enforced stop to more search because everything is avilible in chat regard any aspect. people no longer bother and invistigate the things to improve because chat gpt is yendas-ing them in one click by easy access. These platforms, which providing ready made information are undarmine^d research inhibits and analytical skills of person.

At second decade of twenty one century, the world is enveloped by internet and technology. The deep fake news are violation agents by artificial intelligence. The sophisticated spread of deep fake news is unpredictable. Deep fake news occurs in distinct forms including videos (created by noises), images and generative text. They usually utilize as to spoil image of any person or sector. As Russia used memes to target the 2016 US elections and China used memes to target protestor of Hong Kong. These dissemination represent an obvious threats. These disputes only bestowed by advancement of progressive world.

The weapons are either being associate with artificial intelligence. The overstepping artificial intelligence (AI) is snatching control of deadly weapons from humans. This is particularly

concerning because Ai have lack of empathy and will no follow the principle and regulations in battle in account of self development. It will kill overclisly and indiscriminily. Henry Kissinger talked about this evil of Ai in his book "the age of Ai". He asserted that adding non human logic to weapon system can result in a disastor. There is no deny to the fact the human were remain linked with bloody war but the war by Ai led the world toward assisinition of it.

The unpredictable emerge of new feature of Ai is self development of it. it is being adopt rapidly. Ai contains access to data that are circulating in internet, Ai mimicing the human brain and performing task quick and more accurate then humans. Ai is being developed with out feeding any commands by humans. it is

2

assuming data and developing it self regard them. The self generating idea of AI do not guarantee rather it will like to be human or machine. AI trains its algorithms with the help of regularities and patterns that found in accumulated data, which is based on pre loaded facts due to these reasons humans are unable to develop AI. The drawbacks of AI self learning include job displacements, ethical concerns regard privacy and bias. The self learning of AI can evoke severe complications for mankind.

AI either played crucial role in environment and climate. The sudden changes in climate bring forth various hurdles and challenges which turned out mighty loss. AI contains ability to reduce waste and optimize energy consumption. Machine learning algorithms can analyze data from smart grids

to optimize energy consumption in real time, this can lead to reduction in green house gases and helps to deposite effects of climate change. The fertility of soil is either being measured by aid of Ai. Wheat predictive reports stimulates local masses to get ready for facing and tackle challenges. Enormous aspects of environment are encircled by technology.

How ever the technology improved, its primary benefits will include higer productivity. As companies turn to GAI for content creation, software developments, marketing and sales and customer services. Ai reduced margin of error in trade, and boost economy annually 1.5 percent. While there is some negative effects on some labour segments. Robots and automations increased productivity of, lower production cost and created

unskilled based technological jobs. The massive use of robots increased productivity which leads to an increase in gross domestic product (GDP).

The ease access of Ai to each community resultant in both positive and negative aspects. But its either true the Ai facilitated those people they are naturally disadvantaged. The special children also now experience the world as normal childrens.

Advancement in Ai either enables progress for special childrens.

Many special school in india are using Ai powered gadgets for childrens. These children continue to participate in progress.

The above arguments made it clear the Ai is neutral and can be used in both positive and negative purposes. Ai remain indispensable part of human future. However some measure definitely

to keep in check (the oversteering)
 The global have to play
 a unique roll by avoiding invest
 on these technologies which are
 predictively concern to threat
 of humality. Yava Nooh Hazari
 that human consciousness should
 never be undermin for develop-
 ment of Ai. Human consciousness
 differentiate a man from Mach-
 ine.

A special focus on those
 people who will not only use
 Ai but also ~~create~~ enhance it
 applications in future. The undas-
 graduate student must thought
 regard ethical considerations,
 that they must keep regard
 Ai- Italian universities already
 embarked on journey and other
 are following. It means that
 future youth 'easily limits
 Ai and over come it consequences

The developers of AI and the platforms which are using AI should be held accountable for their misuse. This means that whenever a questionable activity conducted through Artificial intelligence, it handlers must be call out. This would deter them from such activity in future. Lesson should be learned from American senate that called up Mark Zuckerberg to question him about privacy policy of its platforms the others either need to do so as well.

In a nutshell of above mentioned arguement the misuse and over use of AI ~~leads~~ it to ~~overstepped~~ its bounds. Artificial intelligence has overstepped its bounds at several ways. Including destruction of human habitat as a ~~read made~~ available information which ~~turning~~ as demise of research. chat bots, ~~content~~
