

The climate is changing, So should we!

Outline

1- Introduction

Thesis statement: No doubt, we ~~do~~ should also change ourselves with the changing of climate. However, some critiques also argue against it, but the given evidences do not agree to the logic. Therefore, ~~the~~ climate is changing, so should we as well.

2- A bird's eyeriew of the natural environmental stewardship

3- We should also change with the climate changing (Thesis)

- Forestation should be preserved
- Massive industrialization should be controlled
- Burning of fossil fuels should be sanctioned
- Rampant urbanization should be curtailed
- Population explosion should be discouraged

4- We should not change ourselves with the climate changing (Anti-thesis)

- Reforestation can meet with the loss of deforestation
- Industrialization is the source of human survival

- c) Renewable energy generation has potential over fossil fuel loss
- d) Urbanization is a wheel of economic tyre
- e) Population explosion has worldwide benefits

5- The climate is changing, so we should still ~~have~~ need to change ourselves (Synthesis)

- a) Awareness campaign on preserving natural forestation should be promoted
- b) Industrialization should also has certain limitations
- c) Renewable, clean energy generation is slow and weak
- d) Sustainable urbanization is a source of economic development
- e) Population explosion has put the world into troubles

6- Conclusion
