

The Israel-Palestine Conflict and Role of the world.

Focus on comprehensive approach in addressing the topic

The Israel-Palestine conflict is an ongoing military and political conflict. Beginning in the middle of 20th-century, it is the world's largest continuing conflict. Various attempts had been made to resolve the issues b/w the two, but not fruitful. For example, in recent past, Abraham deal was being in consideration to solve the issues, but again it was not result oriented, as it was expired. Due to not settlement, there always had been uprising against Israel and the reaction from Israel every time, harmed the palestinians badly. For example, in Oct, 2023, Hamas launched a strike against Israel, due to Israel response, 713000 palestinians have lost their lives, buildings are uprooted etc. The western countries, especially, USA, U.K, and major western capitals are silent till now, but there is little hope of ceasefire, as China is playing key role in this case. There is a need of robust economical and political boycott of Israel, by the major world powers, especially, the Muslim countries to cause ceasefire in Gaza.

It was not about solving this crisis.

Diplomatic measures are needed
