Artificial Intelligence as the future of Education.

OUTLINE

1) **Introduction**

Thesis statement:

Artificial Intelligence (AI) is influencing every area of human society and education sector is not an exception to this influence. AI is affecting every player in this sector whether a student or an educator. It is changing the way knowledge is attained, processed and diseminated. On the other hand, there are serious concerns about ethical use of AI in this sector that need to be addressed on priority basis.

2) **Future of education is tailored to AI advancement**

3) **What AI has to offer to education sector**

   a) User-specific learning experience
   b) Virtual learning
   c) Practical understanding via virtual reality experiences
   d) AI-assisted apptitude testing and career counseling

[Red ink annotations:]

Need to work on better understanding if topic
You have not address the asked part well

For future, you need to talk about present development
See how AI is beneficial or impacting education sector presently to predict the future

e) Opportunities for special students and differently-abled individuals

f) Assistance in mangerial and administrative tasks

4) Challenges posed by AI

a) Unethical use of AI by students

b) Overshadowing the role of teachers

c) Dissemination of racial, ethnic biases among students

d) Authenticity of AI-based Knowledge

e) Social implications of using AI-based learning environment

5) Strategies to ensure secure and ethical AI-based educational model

a) AI regulations to ensure ethical use of AI systems for education

b) Teacher training to incorporate AI in teaching framework

c) Educating students about ethical and unethical study practices

d) Ensuring that AI-based learning environment replicates social learning environment (discouraging isolated learning practices)

e) Government to formulate policy to ensure relaibility of AI-generated Knowledge

6) Conclusion
