

## Role of technology in Agriculture

Technology plays an important role in the societal and economic development of states. The countries have embraced the modern technology in every spheres of life. The modern technology has helped the countries in spurring their industrial growth and substantial production. The countries have eased their agriculture burden by adopting the technological driven machinery and expertise.

Agriculture contributes 22.67% to the Pakistan's gross domestic product (GDP) and accounts for 38% of the total employment (The focus should be on agriculture, Dawn). It is obvious that Pakistan can <sup>further</sup> spur its agricultural growth by embracing modern technology.

## Air Pollution

Air pollution has become an insurmountable challenge for the world. There are different factors responsible for the contamination of air. The world has witnessed the catastrophic effects of air pollution in the present time. The Public health experts have warned that nine out of 10 people breathe the air that exceeds World Health Organisation (WHO) guideline limits for pollutants, with low and middle income countries, including Pakistan suffering the most. It is obvious that the air pollution has become a threat to the survival of mankind.
