Moreover, artificial intelligence prevents criminal and terrorist activities. Artificial intelligence can analyze vast amount of data including social media posts, communication, financial transaction which easily detects suspicious behaviour. In Pakistan, many artificial intelligence systems have been installed. These installation not only reduces the threat of terrorist activities but also stopping crimes in the country. For instance, the ~~was~~ newly introduced "Face Trace System" in Punjab, which is a data bank of over eighteen million individuals including suspects and crimes. This advanced facial recognition technology enables law and enforcement officers to stop crimes and terrorist activities. (Asif, Punjab police launch AI, 6 July 2023). Shortly, artificial intelligence is a powerful tool in the fight against criminal and terrorist activities.
