## 6. Conclusion

In primitive ages, men has been living a complex life facing resistance of nature in the way of development. But as the time passes, human learnt to live in societies and it is the human inventions that change the world from darkness to the age of enlightenment, and taught the human the principle of independence. As a common saying: "A wheel is a greatest invention of all time. Without it, we would still be living in caves." There are the array of human inventions that amare the life of ordinary human being.

None of the invention has moves us backward, its only depends on how the human used them. So it is not a scientific inventions that move societies backward but the illusion of human mind that utilire the inventions against the human ~~and~~ being.

The emerging intēnet services consolidate the transparong and accountability and streng then democratic system of nation. It plays very important role in economic transformation and increase the standard of life. With the help

of these inventions men able to combat with pestilence. But the statement that the human invention move societies backward make no sense. Although there are some signs that compel one to think that the human inventions move the societies backward in primitive ages. Over reliance on technology, addiction of internet services, arm race, disasterous environmental impacts are few instances that convince one the argument associated the backwardness with human inventions. But the matter of fact that none of human invention moves the societies backward its a human that use these invention to harm others. As the fault lies in our thinking, not in human inventions. It is clear that no one can deny how the human inventions transformed the world from agricultural revolution to till now. It provide opportunities to become skillful and progressive, it is a source of information sharing and it helps us to combat with ~~bar~~ negative environmental consequence. Human inventions promote sustainable development. In short, many situations tell the negative side of human invention but it still up to human either to use it, in the favour of human being or against it.
