

Repressive Power of AI

The global internet landscape finds itself grappling with profound challenges. The repressive power of AI is being utilized by governments to censor information and forward their agendas. The lines between reality and deep fake are being blurred. For instance, the Freedom on the Internet report 2023 reports that ~~a shocking~~ at least 22 regimes are using AI to censor social, religious and cultural information unavourable to their governments. Furthermore, the report paints a gloomy picture of a steady decline of global internet freedom. ^{ever} The much democratic North is actively using AI to intensely control digital spaces.
