Global warming and limited financial resources both influence countries' ability to combat climate change.

Climate change in Pakistan is exacerbated by insufficient financial resources. Insufficient financial resources weaken Pakistan leading to failures in countering climate change. In fact, the international organizations of climate change have not fulfilled their promises to finance the underdeveloping countries, like Pakistan. Indeed, Pakistan is not in position to have resources to tackle climate change. Consequently, the situation is getting worst with the passage of time in the form of flooding, which are being faced by Pakistan. According to United Nations Development Programme report, Pakistan is ranking at eight most vulnerable country to the impacts of climate change. This vulnerability shows that Pakistan has not have sufficient financial resources to combat climate change. (United Nations Development Programme, Report, 2023). In short, Pakistan is at the risk of climate change due to insufficient <sup>financial</sup> resources.
