

Title: Is Environment going to Listen to our Promises?

Outline:

- ① **Introduction (Thesis Statement)** There are two schools of thought, one supports the idea and other rejects it. After logical analysis it can be built that, environment is not going to listen to men's promises. As, the present degrading environmental health is enough to substantiate it.
- ② **Nexus of Environment with the Humans's Promises**
- ③ **Environment is not going to listen to the Promises of Humanity**
 - i) Transition from the Global warming to Global boiling despite signing multiple Treaties is a reason that Environment is above Promises
 - ii) Rising Climate related Catastrophes highlight that the Agony of Environment

P.T.O

iii) Weakening Atmospheric Health and growing Issues of Acid Raining even after several Environment Dialogues

iv) Unstoppable Biodiversity loss till today showcasing the failure of International pledges and Nature's Stance

v) Unprecedented Pandemics depicting the unwilling of Mother nature to bear more fake Promises

vi) Increasing Sealevel and melting of Glaciers is enough to show the Environment is not going to listen to Promises

⑤ Environment is going to Listen to the Promises

i) Healing of the Ozone Layer is a sign that

~~ii)~~ Environment is listening to the Promises

ii) Survival of Endangered species in the time of Global warming is badge of hope

iii) Break from one Pandemic to another is also make sense that Environment is aligned with Humanity

i) Despite that the Environment is not going to Listen to the Promises

i) Uncontrollable Global warming and harshening U.V rays make no sense the Environment is in favour with Humanity

ii) A Long and growing List of Endangered species has shown

that the unwillingness of the Environment

(15) No time for between one Climatic Catastrophe to another also make no sense that Environment is in alliance with humanity's Promises

⑥ Conclusion

Essay

Almost two centuries ago, the world witnessed an unprecedented event. An air or a cloudy air or to be more precise a fog engulfed a portion of the city, and famously known as the event of the London smog. That single event harmed the basic physiology of the residents. Later, it alarmed the humanity regarding that the increasing incidents. Moreover, after the scientists relentless hardwork, they concluded that the growing such

events are due to environmental degradation. That was the effect of industrialization. Moreover, that discovery instigated the public and they started protesting, which compelled the government to devise the environmental policies. To one's amazement, that ended in the shape of Stockholm Conference of 1972. After that the process of environmental pledges never stopped.

Having said that, it must be asked that why in the 21st century the environmental woes have increased.

The answer is simple, to and behold, environment has had enough with the fake promises of humanity and has turned its face from the pledges of humanity.

As it can be seen that the through the transition of world from the Global Warming to Global boiling. Not only that, rising climatic disasters; deteriorating atmospheric health; and unstoppable the loss of biodiversity are also included in the list.

Be that as it may be, there are still the people who argue that environment is going to listen to the promises of men; As they claim that the healing of ozone layer and the survival of endangered species are due to the alliance of the nature with the pledges to humanity. Despite that, no one can alter the fact that the current condition of the mother Earth is clear sign, that environment is not going to listen to the pledges of humanity.

The nexus of the environment with the humans' promises ~~is~~ is like a roller coaster. As the rotation of the roller coaster never let the coaster to stop at one place, similarly the ambitions of humans to grow ~~never~~ more and more never emphasis men to stand with the environment at pledges. As said before, from the 20th century till now the humanity has signed multiple treaties for the protection of the environment

For example, Montreal Protocol of 1987, Kyoto Protocol 1997 and Paris agreement of 2016 all these have failed miserably except the first one. Therefore, one can say that the relation of the environment with the humanity and vice-versa is like roller coaster.

Therefore, it is being argued that the environment is not going to listen to the promises of humanity. As it can be seen through the transition of world from the global warming to global boiling. It was the 21st century when the political leaders took the issue of global warming. Unfortunately, despite that the Nations-States took the issue for granted. Owing to that negligence the world has shifted to the global boiling phase. The era of global warming is over and the period of global boiling has started Antonio Guterres. Therefore, it is not wrong to say

that the environment has shifted its way and now is not going to listen to the promises.

Additionally, the rising climatic disasters also highlight the gony of environment towards humans for their fake promises.

As that can be comprehended through that, almost two decades ago the disasters related to the climate were not that common.

Currently, the frequency of disasters has increased multiplicatively.

For instance, the 2022 floods in Pakistan, the 2023 floods in Libya and the earthquake in Turkey and Morocco in 2023

are enough to show that the rising frequency of disasters. Thus, it is right to mention that environment has diverged its way from the false pledges of humanity.

Similarly, the unstoppable loss of bio-diversity from the industrial revolution till now also shows that the apathy of humans

Towards the environmental pledge.
As, in the Earth Summit of the
1992 the Convention on the
Biodiversity was also signed. However,
after passing the decades the
condition of the bio-diversity
remained unchanged. According to
IUCN $\frac{1}{3}$, $\frac{1}{8}$ and $\frac{1}{6}$ of
the reptiles, fishes and birds
are endangered. Moreover, many
~~sp~~ species of have been lost
till the industrial revolution. Thus
owing to consistent planned pledges,
now the environment is not
going to listen to men's promises.

Having said that, there
are still the believers of the school
of thought that the environment
is going to listen to men's promises.
As they argue that, the healing
of the ozone layer is a sign
of it. After the signing of the
Montreal protocol all the countries
of the world promised to save
the environment and discouraged
the use of toxic material. That
helped the ozone layer to heal itself.

As per the data revealed by the NASA in 2001, the Ozone layer has started healing itself. The major portion of the O₃ layer has been cured. In that sense, it is right to mention that the environment is going to listen to man's pledge.

Be that as it maybe, but ~~or~~ one can change the fact that, the uncontrollable global warming and harshening the UV rays make no sense the environment is in favour with the humanity. The healing of the O₃ layer can not be in and of itself the sign that environment still listens the promises of humanity. The rising other problems of the environment depicts an parallel picture. As, according to UNFCCC the temperature of Earth may temporary rise from 1.5 °C to pre-industrial level (10-06-2003). In that context, it is the bitter truth of 21st century. The environment is in no mood to listen.

to the pledges of humanity.

To conclude, as per the idea is environment going to listen to men's promises? Two schools of thought prevail. One argue that in its support and other rejects the arguments. However, through statistical analysis it can be built that the latter idea is more rational and logical. As the current depleting environmental status substantiate the idea. Moreover, the shifting of global warming to global boiling, rising climatic disasters and increasing sea level also strengthen the point, that environment is not going to listen to humanity's promises. Contrary, the supporter of that idea argue that the heating of ozone layer and the gaps between one disaster to another show case the willingness of environment with the men's pledge. Whatsoever, the reality is that the environment is not going to listen to the promises and pledges of mankind.
