Title: Importance of Morality in Intelligence

The contemporary man needs to understand the use of intelligence for love and kindness. Human intelligence must incorporate the empathy to develop social morality and responsibility enhancing survival. This is a great challenge for our education system to train social morality along with intelligence. Traditionally, the morality was considered to be the ~~para~~ subject of religion but it failed. The lust of power and wealth have resulted into the loss of fear from God. The contemporary man has no time to deal with moral issues. He ~~and~~ follows the Machiavellian principles of power as morality and morality as power. This ~~can~~ can lead to nuclear destruction. Strong commitment of educational institutions is required to incorporate morality with intelligence and to train the human by giving them love as assurance, kindness as security and functional empathy for integrity.
