

Mashaal Impacts

→ avoid repetitions

Floods are being faced by Pakistan due to climate change. In Pakistan, climate change leads to seasonal variations, such as heavy rainfall, which further increases the impacts of climate change. In fact, climate change increases the time and duration of ^{heavy} rainfall, which leads to floods in the country. The recent floods in many parts of Pakistan ^{were} caused by heavy rainfall and seasonal variations. ~~For instance~~ The fact is that the heavy rainfall is recorded ^{in Pakistan} which is nearly 15 inches (375) millimeters of rainfall, almost three times higher than the national ~~30~~ thirty years average of five inches. These heavy rains increase the sea level, which causes urban flooding in the country due to climate change. (Centre for disaster philanthropy, Pakistan floods, 2023). In short, Pakistan is experiencing floods as a result of climate change.
