

## Essay paragraph

Sub-heading = Need of Agriculture research to increase Production

~~The need of~~ Agriculture research is crucial to increase the production of crops in Pakistan. It is because farmers rely on old practices which is the main cause of decrease in agricultural outputs. Agriculture research can give better ways to cultivate the crops so that they can be saved from severe weather conditions and pesticides. On the other hand, the research in agriculture sector of Pakistan is lagging far behind. As Dr. Ishrat Hussain describes, "Agriculture research in Pakistan, spearheaded by PARC and NARC, has not kept pace with the times. Due to paucity of funds, bureaucratic infighting, bad equipment and vague organizational structures and mandates, these institutions have not fostered a strong research environment." Therefore, it is inevitable to focus on agriculture research, if government want to increase the production of this sector.
