

Outline:

Human development and Economic Sustainability Go hand in hand

Introduction:

Economic sustainability and human development are two mutually dependent factors. The long term stability of any country depends upon its investment in human development sectors. Access to basic necessities of life such as proper health facilities, quality education, equal distribution of resources, gender equity and political stability are important indicators of economic development. However, there are several barriers that can hinder human development such as bad Governance, Political instability, dependence on foreign aids and loans, social inequity, hurdles in female education, low levels of education and skill-based learning. These barriers can be overcome by adopting certain policies, such as a productive workforce, skill based learning continuity of economic policies, sustainable economic policies and technological advancements that attract foreign investments. Although human development is crucial for transforming people's lives, economic sustainability plays a vital role in paving way for
