

ESSAY BODY PARAGRAPH.

People have become overly dependent on technology.

Argument:

Over reliance on technology for communication among people.

People have been heavily relying on technology for ~~connecting~~^{communication} with people. Technology is a tool which makes a human life far more easier than it was before industrial revolution. Firstly, humans use technology in the form of emails through which they convey their messages within seconds. Secondly, they provide a mode of ~~vi~~ hence causing over reliance. Secondly, instead of having a conversation with people physically, they prefer relying on their mobile phones for a virtual conversation with people. In 2022, the value of global video conferencing market reached up to \$70.2 billion. Therefore, people rely on technology to communicate with others.
