Central Superior Services Examination (CSS) 1973

Passage.

As a kind of foot-note, I should comment that there are those who doubt whether it is within the power of science to ensure over a prolonged period freedom from destitution and famine for mankind. The argument is the old one of Malthus that in the race between increasing population and increasing production, population must eventually win. Those of us who decline to accept this pessimistic view recognize the difficulty of the practical problem of meeting the needs of an ever-expanding population. We have, however, greater faith in human resourcefulness. We note that it is not only in the technology of production and medicine that the present generation differs so greatly from the one before. A similar rapid change is likewise occurring in the thinking of masses of people. This change is brought about partly by experience with technology by more widespread education. Here lies a new realm in which dramatic advance is being made. The hope for the longer future lies in a growing understanding of the conditions for the good life of man in a world of science and technology, and the acceptance of a morality that is consistent with these conditions. With the widespread thought now being given to such problems by persons whose thinking is schooled to rely on reason and tested fact, it is evident that advance from this angle will also appear. Youth may, for example, consider the remarks as an effort to see in truer perspective the type of ideals that are appropriate to the age of science. Many are those who are now sharing to this exploration of human values. The great question is whether such understanding of human goals and the corresponding development of morals can be achieved before the forces seen by Malthus, and emphasized so forcefully by recent writers, overwhelm the efforts of the pioneers in this new and critical field. I do not believe that this is inevitable. I am confident of man's ability to meet and solve this ethical problem that is so vital to the success of his effort to achieve physical and spiritual freedom. It is relevant that as I analyse the reasons for my faith in man's eventual ability to meet this critical problem, I find that prominent in my mind is the confidence that God who made us holds for us an increasing density, to be achieved through our own efforts in the world setting that he supplies. This observation is significant in the present setting because it is my strong impression that most of those who have the firm faith in man's advancement likewise have a religious basis for their faith. If this impression is valid its consequence is clear. It means that it is men and women of religious faith on whom we must primarily rely to work strongly toward achieving a favourable world society. It means also that those of religious faith because of their faith have a better chance of survival, a fact that has a bearing on the attitude that may be expected in the society of the future. 32

Final Draft

A Debate ^(Title with Marker) between Science and Religion

Today, the world is going through several crises and issue of hunger is one of them. To overcome this issue, most of people believe that science is the only way out. However, people like author of this passage keep different point of view. According to them, despite of science,

Following the religious norms is also important to take world out of such crises. Similarly, science is completely relying on facts and figures which are not enough to enhance man's spiritual power, so, in order to achieve religious

spirituality and to solve such issues, people must revert themselves back to God who does not

lack in resources. In conclusion, it is the responsibility of religious leaders to guide people on right path.
