The temperate region proves best for keeping energies active as it continuously engage in overcoming obstacle of cold climate. The extreme cold insensitize human energies and a hot-climate demands little energy while moderate cold have deep soothing effects on human generation in which man utilizes its energy in difficult but no hopeless efforts. Man has to do many efforts to cope with extreme cold and require ^{much of} nourishing food for replenish of energy. Contrarily, tropics is quite different require little food to sustain life and need little utilization of energy. In comparison of tropics and temperate climate, in hot climate weather life is easy as one is generally sluggish while alot of efforts demands by our minds and bodies in cold season. So human nature also get differences with changing climes.
