

Climate Catastrophe and Capitalism Go Hand in Hand

Outline:

1. Introduction:

Thesis Statement: The primary culprit of the climate catastrophe is capitalism which prioritize economic growth over planet's future. Human are ignorant of the effects of capitalism on the environment. To survive, society must reject the current capitalist model and its tendencies.

2. Capitalism is the main cause of Climate Catastrophe:

3. How Capitalism is affecting Climate:

a. Capitalists' emphasis on continuous economic growth over which exacerbate environmental problems

b. Multinational companies export electronic waste to developing countries which have minimum climate regulations

c. Developed countries: use developing countries as their dumping ground for hazardous waste

d. Developing countries suffer the most in capitalist induced climate catastrophe

e. Capitalists depend on fossil fuels for cheap energy source which increases CO₂ emission

f. Current form of Capitalism is incompatible for a sustainable future

4. How Humans are Ignoring Capitalism effect on climate:

a. Prioritizing luxurious lifestyle over the survival of humanity

b. Media distraction from critical climate issues to trivial matters

c. Humans' focus is on minor issues' solution

5. How to Reduce Capitalism Effect on Environment:

- a. Society must reject the current form of capitalism and adopt sustainable capitalism
 - b. Governments and private firm must invest in renewable energy to move toward low carbon economy
 - c. Reduction of consumption of unnecessary and destructive goods and services
 - d. End fossil fuel subsidies to promote decarbonization
 - e. Developed countries must support Green Climate Fund for a transition to sustainable future.
- b. Conclusion:

Essay

Before 1800s, no human in history had faced the challenges the world poses today. Since the industrial revolution, Earth's temperature has been rising drastically which is affecting daily human life. At first, the new age of industrialization was seen as new era of prosperity.

However, this age of industry not only disrupted Earth's climate but also fuelled the rise of capitalism. Which led to shocking environmental and societal consequences. The capitalism

emphasize on economic growth which increases climate problems. Multinational companies and developed countries export their waste to developing countries, which exploits their economic situation. The climate catastrophes affect developing countries the most.

Capitalists depend on fossil fuel for cheap energy. This shows the current capitalism model is incompatible.

Furthermore, humans seem to avoid the situation by prioritizing luxurious life, focus on minor issues, and the media also focus on trivial matters.

To reduce the effects, society must reject the current capitalist model,

government should invest in renewable energy. Reduction of unnecessary consumption and end to fossil fuel can promote decarbonization. And green climate fund must be supported by developed countries for sustainable future. The primary culprit of the climate catastrophe is capitalism which prioritize economic growth over planet's future. Human are ignorant of the effects of capitalism on the environment. To survive, society must reject the current capitalist model and its tendencies.
