	U Name: Wasm Sajjad.	
	Q.No.7 "Artificial Intelligence: the death	
	of creativity"	
	Outline Overall, it's fine	
	1) Introduction	
	Thesis Statement: The onset of artificial	
	intelligence on the world stage has led to the	
	death of human creatively it is evident in	
Ag William	various forms across different sectors: However,	
	certain steps have the potential of combalong	
	the challenge of the olegan of creativity by	
	artificial intelligence	
	2) Artificial intelligence bound to have negative	
	impact on human creativity	
	(Alarm bill by Geoffrey	
	Hinton—the godfather of AI)	
	3) Why death of creativity has occurred due to	
	artificial intelligence	
	a) Lack of political will to control artificial	
	Intelligence	and the second s
	b) Shortcomings of the modern education	
<i>a</i> 3	system in giving creative education paving the	
	path for artificial intelligence	
	c) Lack of a global abody to contain	The state of the s
	artificial intelligence as a cause of the	
	unrestrained use of artificial intelligence	

4) How there is the death of creativity	
The state of the s	1
due to artificial intelligence	
(a) Overreliance of the students on	
AI tools as a compromise their	1
creative thinking	
Chat GIPT phenomenon for	
trivial matters, assignments, etc)	1
(b) Dependence of feating and professors	
on AI for preparation as a blowback	
to their creativity	
(Class room planning, lesson	
plans, etc)	
(c) Fading creativity of writers due	
to overdependence on artificial intelligence	
(The Atlantic Report)	
(d) Doctors in health care artepending	
upon artificial intelligence for trivial	_
concers and their declining creativity	
[koko app in the United	
kingdom and the reaction of policub)	,

Hollywood actors against the us	
of AI tools in the industry?	
	1

about the real purpose of education)

(c) Formulating a global body to control artificial intelligence in the field of creativity [like the International Atomic Energy Agoncy and IMF, suggested by Elon Musk, etc) (7) Conclusion Essay + kecording to the renowned writer, Noam Chomsky, human is much more intelligent than any artificial system But, in today's world, the human creativity has been challenged to a greater extent by the emergence of artificial intelligences as is the case with other spectors. There are various reasons as to why the artificial intelligence has resulted in the death of creativity in humans First and foremotion the lack of proper political will to combat it. Second is the inability of the modern education system to produce creative preopter tast but not the least, the lack of a global body to contain it is also leading to the death of Creativity by artificial intelligence. That artificial intelligence leads to the death of creativity is evidat in a number of factors in various sectors. The factor of most concan is the over-reliance of students on AI tools of all

kinds of tasks, which otherwise ought to have been done by their own creativity. Similarly, the teacher and professors are also depending heavily on artificial intelligence for their preparation. In the same ven, the creativity of writers is fading owing to their huge reliance on artificial intelligence. Also the clocks in the healthcare system have started using artificial intelligance rather than their own creatively in the film industry, human creativity is being ignored after the emergence of artificial intelligence Likewise, workfire o also o relying heavilyon · Al took for grenorating CVs, reportiete last but not the last, artificial intelligence is further pushing against the wall the creativity in the sheady dirmal education system in the backward greas of the world to a country, Pakirtan is also quite prone to the down of creativity by the artificial intelligence Having said that, there are certain steps which have the potential to mitigate the challenge Firstly, creating political will to contain Al will go a long way in minimizing its negative impact on creativity Seconday, emphasis should be laid on standardizing The substandard education for creating "creative people last but not the least, the creation of

a global body will really come in handy. in controlling the death of creativity by artificial intelligence The discussion goes on, and the onset of artificial intelligence on the world stage has led to the death of human Creativity It is manifested in various forms across different sectors. However, certain step have the potential of combating the challenge of the death of creativity by artificial intelligence Artificial intelligence is bound to have negative impact on human creativity. Human eventivity is a unique feature of humans which enabled them to invent the mystenes and conquer the world. Although it takes long, but results in magnifect outcomes. The sudden reliance, that too heavily on Artificial intelligence has led to the death of Human creativity. Greoffrey Hinton, the godfather of artificial intelligence, has sounded alarm bell over the uncontrolly. use of artificial intelligence, warning of its potential risks and dangers. Similarly, the same concern & shown by other experts, and according to them, Human-AI empowerment agenda has not been

(7)

achieved Hence, it is derived that the uncontrolled use of artificial intelligene leads to the death of human executivity. There are various reasons as to why artificial intelligence has led to the death of human ereativity First and foremost is the lack of political will to control artificial intelligence has resulted in the death of human creativity by it it is the political will which has the potential to curb any issue facing à state legislation à done in the parliaments to control an issue Similar is the case with the unrestrained use of gytificial intelligence, and no proper and concrete political will is evident in the world nations of Whough some countries have risen to the issues , and lave started legislating on the matter, other countries are 3 till in deep slumber, resulting in the erosion of himan creatively by the artificial intelligence. Second region of the cleath of creativity by artificial intelligence is the shorteaming in the modern education system in giving creative education. It is though creative education that people

become & able to reap the benefits of their own creativity Evidences show that the education system is ending in many countries of the world, which make them prone to succumb to the r siren songs. of artificial intelligent when the educator I updated the people will not feel any need to resort to artificial intellipene for their fasks. It is the case mostly with the backward countries where education is not given priority, leaving the people at the mercy of artificial intelligence So, the inability of modern education in inculcating creativity in the people also leads to the death of their creativity by artificial intelligence. Last but not the least, the lack of a global body for confaining artificial intelligence also leads to the death of human credivity. Whi ficial intelligence has become an international concern, and experts have raised their voices against the unvestrained use of artificial intelligence Exports such as Elon Musk have fermed artificial intelligence even more dangerous than the afomic bomb. Such a great concern needs international cooperation, but, at the

	moment, no any international body is there	
	to confront the challenge posed by artificial	
	intelligence to humans in general, and human	
	· creativity in particular Therefore, lack of	
	ginternational cooperation in the form of 5	and the same of th
7. 17.	governing body for ortificial intellenge also	
	result in the death of homan creativity by	
	artificial intelligend	
	That there is the	
	death of human creativity by artificial	
	intelligence is evident in a number of sectors.	
1	Of foremost concern is the over-reliance of	
	the students on Al took for all of pair	
	fasts, at expense of their own creationty. The	
	students need to use their own mind for	
	solving their assignment and other tasks At	
	the end of the day, they have to pass	
	their written examination with their sun	
	creativity But; the heavy reliance on the	
	· AI took such as Chaf GPT has done	
1.00	great having to their creativity of the	
	students. What is more wormsome is that it	
	is unable to be defected by their factor.	
	Hence, the overreliance of students on	
	artificial intelligence is a great hindrava	
	in the way of utilizing that own death vity	44
Pa-		1 32 to second

Similarly, dependence of teachers and professors on artificial Intelligence for preparator is also à blowback to their natural creativity Teachen have to spend i great deal of time in preparing to teach their studenty Thay have to discover new avenues of knowledge for their students Unfortunally after the emergence of artificial intelligence, teachers and professors have been reported to be relying heavily on it for classroom planning, creating lesson plans, etc. Ut i through the natural use of creativety that real and lasting knowledge is delivered to the students so the creativity of the feacher and professors it on constant decline after the appearance of artificial sullingence In the same vetro the creativity of writers is also fading due to their reliance on artificial intelligence. The writer use easily available content using artificial intelligence, and do not use their own creativity. The Atlantic reported -that the AI modely have taken text from approximately 80,000 books of guthors from ground the world. Their content

(II)

and writing style are easily and resolity available on AI tools, and any writer can get the information and writing style of the Luthons, say Elia shafak, at a click They donot sort The things out by themselve, rather they depend on artificial intelligence for the writing purpose. Therefore, it is derived that artificial intelligence is leading to the death of the creativity of writers in the world healthcare have become addicted to The use of artificial intelligence, posing great threat to their own creativity. Whenever human doctors examine human patients, it leads to satisfactory results However, after the opening up of the artificial intelligence, doctors, have becomes dependent on it for even trivial matter. Koko, a mental app in The United Kingolom was prevented from working after few months of its launch, largely due to the non-satisfaction of the people Hence, reliance on The ficial intelligence leads to worm among the people because . . quording to them, human are more creative

the state of the s	1	
	tham machines of doctors depend heavily	
	on such tools, their own creatively will also	
	decline, causing even more worry among the	
	people. Hence, artificial sutelligens in healthease	NO.
	also results in the death of creativity of doctors-	
	Likewise, the creatively	
	of artists in the film industries i also	
	constantly being compromised after the	
	emergence of artificial intellegence The	
	actor spend a great amount of time for	
	preparing their actions, and the into connobration	
	the human emotion the appearan	
	on the world stage of the artificial intelligences	
	the industries have largely shifted to this	
	new technology; which has caused worry	
	amongst the artists The Hollywood actors	
	recently concluded their 145-days	
7	propert profest against the excessive use.	
	of artificial intelligens as threat to Their	
	existence. It leads to their replacement by	
	artificial intelligence, which will lest to	
	huge unemployment in the sector Soist is	4
	derived that artificial intelligens of the cause	-
A Section 1	of the death of creativity of the	
	artists in film industries.	
	In the same way,	
		and delivery the second

the workford is also relying much heavily on artificial intelligence for their tasks, setting eside their own creativity. They deceive their booser by preporing magnificent data required. The workforce cise The artificial intelligence tools for preparing magnificent CVs, which does not reflect their own creativity, but that of the artifical intelligence Similarly, the employees use A1 tools for generating reports , and in the matter make their own creativity redundant In this way their own creativity is constantly being evoded which poses risk for their future. So the dependence on artificial intelligene also result in the deals of creativity of the work force. Last but not the least, the artificial intelligence is further pushing against the wall the creations in the already dismil education system many countries of the world face the substandard education system where creatists of the people cannot bee fully exploited. In countries mainly in the global south, the education sector is particularly prone to the artificial infelligence. They use it heavily for

accomposating or filling the gap left by the dismal education. Although the people ux artificial jutelligene the world over, but it is particularly the case with the underdeveloped counties that connot divert a bulk portion of their GDP to the education sector. Here, there is no donging the fact that artificial julelligence. U a source of the death of creatures in the already poor education system of many countries of the world Pakistan 1 as an individual county, is also quite prone to the widespread use of artificial intelligence causing the death of creativity of its inhabitants. One of the reasons is that the country is already facing the issue of exploiting the creative of its citizens though standard education system. Reports point to the first that the quality of education s not improving, mixting the people prey to the mighty artificial intelligence The county has formulated its National Al Policy to deal with the fechnology in a smart way. It is essential that such a piece of legislation should be properly implented

	a manager of the control of the con-
for streamlining the artificial intelligence.	
So, the emergene and wide ux of artificial	
intelligene is also considered a threat	
the creativity of the people of paristan.	
Notwithstanding the	
mentioned negative impact of artificial	
intelligene on human creativity, there are	
certain steps which can mitigate such disastrow	
influence firstly, there should be proper	
political will in the country to restrain	
the artificial intelligence such measure	
should be implemented in letter and spirit -	
Afua Bruce in her book, a The Tech Theat	
Comes Next", claims that technology is	
is human creation and only humans can	Sales i
control it Human can control it by	
stremmlining it thugh proper legislation	
in their parliamons Rising to the fact, a	V
number of country such on the U.S., Chinai	12
hubra, Japan, etc, have legislated over the	
matter for the benefit of their prope Similar	
trash should be followed by other countries	
of the world. Hence, certain political will	
has the graterital to confront the menace of	
the death of creativity by The	
artificial intelligence.	
	1754

Secondly, the education system throphoid the world should be made creative so to not to depend on the artificial intelligence It is the noncreative people who fall pray to the artificial intelligence twording to Noom Chamsky, one Should not be concerned with the fact that what is covered in a semestri but he should be concerned about what is discovered in the semsely Similary, according to Einstein, "education is not the learning & facts but the training of the mind to think? It is only when such on education is given to the people that their dependence on artificial intelligence can be minimized. Here, standardization of education has great potential to fight the death of creatinity by artificial intelligence. Last but not the least, formulating a global body to control the unrestrained use of artificral intelligene also has great potential to preserve human creativity in the face of artificial intelligence. The Atificial intelligene is widely discussed To a global problem. So , it should be dett with by a global governing body. According to the experts such as Elon Musk, a

global body of the gort of International Home Energy Agency (IAEA) for dealing with nuclear sector, and IMF for dealing with finance, is also needed for containing the unreined use of artificial jutelligene. Such a body will cooperate and ligise among the world nations, saving the creativity of the people Here, & global body for contending with the issue of the death of creativity by artificial intelligence is the need of the day In conclusion, it is derived that artificial intelligene has resulted in the steath of creating of the humans The concern is expressed by people and expert throughout the world. Certain faction have led to this point of the destruction of human creatisty by the fechnology No proper political will I found in the world to fight it-Also, the education system is not delivering to produce creative people. Smilarly, ther I not proper global 60 oly in place to Contoin the technology bue + such reasons, Artificial intelligence has wrecked home In creshity in various section The

-		7
	students are the major prey to it. Also,	7
	feacher have compromised their creativity in	
	the face of artificial intelligence Doctor in the	
	health care and artists in the film industries	8
	are also on the verge of loosing than	
	own creativity by relying heavily on ordifical	
	juldligene Similarly, worforce, and the dismal	
	education system in the backward countries	
	of the world are also the major violons of	
	artificial julelligance when if comes to their	*
	creativity. As a country, Palastan is also	
	vulnerable to this technology thowever certain	
	steps such as propor political will, standardizing	
	the education, and firmlating a global body	-2-7
	can mitigate the challenge one there steps	
The second second	are taken, and if handled properlys artificial
