Space race is -the biggest money Waster
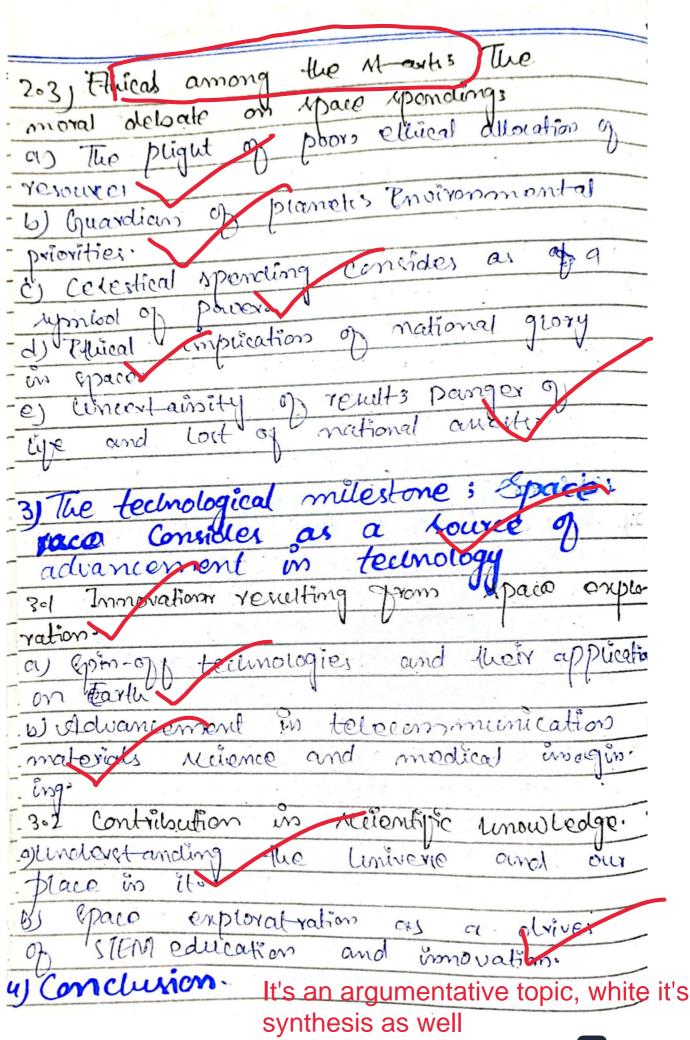

1) Soaring Costs and lofty Dreams: An introduction to the Space race

a) ~~A~~ defining the cosmic competition.

b) Thesis Statement: The Comparative analysis shows that despite achieving various technological milestones, space race ~~resul~~ had ~~devi~~ heavier lost as compare to its achievements.

b) A brief odyssey through space exploration history.

2) Space Race is the biggest money Waster

2.1) Galactic spending: The financial toll of space expolaration.

a) From Apollo to Arteimus: a costly journey.

b) Space budget in modern era

2.2) Redirection of wealth: what could be done instead.

a) Weighing social needs against space ambitions.

b) Solve the issues of fellow men instead

c) spending exporing the world.

2.3) Ethical among the M~~arts~~ The
moral debate on space spending:

a) The plight of poor, ethical allocation of
resources

b) Guardian of planet's Environmental
priorities.

c) Celestical spending consider as of a
symbol of power.

d) Ethical implication of national glory
in space

e) Uncertainity of results Danger of
life and lost of national amenity

3) The technological milestone; ~~Space~~
~~space~~ Consider as a source of
advancement in technology

3.1 Innovation reculting from space explo-
ration.

a) Spin-off technologies and their applicatio
on Earth.

b) Advancement in telecommunication,
materials science and medical imagin-
ing.

3.2 Contribution in scientific knowledge.

a) understanding the universe and our
place in it.

b) Space exploratration as a driver
of STEM education and innovation.

4) Conclusion.

It's an argumentative topic, white it's
synthesis as well

"As we pour resources into exploring the cosmos, could be neglecting the problems here on earth? Or is reaching for the stars our only hope for survival?"

This statement of Lawrance hook creates a tension between immediate needs on Earth and the long-term potential of space exploration. The space race started in Cold war era, when the USSR launched their first space mission and tried to create their hegemony on the world after that the series of launching space mission were started, and till today earthling spend trillions of dollor to exploring the galactic exploration instead of addressing ongoing major issues of the home planet. Earth currently suffer from numerous major problems such as poverty, hunger, unemployement, geopolitical tensions, wars, environmental concern and so on, meanwhile, super powers and emerging powers spending heavy cost to exploring the celestical world. Even just for the sake of creating their dominanncy in the political world, many states taking ethical consideration as for granted, and resultantly, they lost lifes of many astronats and

mislaying the assets. However, this costly journey give innovation in STEM education as well as advancement in telecommunication and healthcare field. But the comparative analysis shows that despite technological milestone space race required heavy cost which is more than its outcomes.
