

IT has become more important especially in this age of science and technology

Role of Information Technology in Education

Information Technology (IT) has taken very much importance in modern time. It is broadly used in different sectors. Likewise, the role of IT in education sector is enhancing these days. It is easier for students and teachers to learn and study as compare to those days when IT was not introduced. IT provides a lot of opportunities to do study in an appropriate way. The students are more facilitated than before. They are getting benefits of IT to fulfill their aims of life. It is easy for a student to learn his/her course online whether through online classes or online searching. A student, who is doing job at the moment, may study as well by using IT. IT is able to manage time properly and study with full focus. Similarly, on the other side, money can also be saved by using IT in education sector because it is a chance for students to learn at home and avoid transportation and other necessary things which are used in physical education. Similarly, teachers can also use IT to prepare their lectures and add new things in syllabus. IT is useful in education sector to promote literacy rate. Therefore, it is the responsibility of government and people to use IT in education wisely and properly.
