Paragraph.

Topic: Energy crisis in Pakistan.

Topic sentence: Pakistan had surplus energy from 1990-2004 but after that Pakistan's energy sector seriously falls short to meet the demand and supply gap for electricity and later gas.

Grammar??

Reasoning sentence: Pakistan has been facing severe crisis in energy sector and one of the reasons is insufficient power generation capacity.

Supporting point: The inadequate development of power generation infrastructure, coupled with ever-increasing population and rapid industrialization which has widened the demand and supply gap.

Evidence: It has been observed that electricity shortfall widened to 700 megawatts which indicates that energy crisis in Pakistan has deepened to such an extent. The sweltering weather conditions have amplified the power supply demand to produce 28,200 megawatts whereas the power supply is 21,200 megawatts. (Usama Rehman, Energy crisis in Pakistan, March 2023)

Conclusion: Thus, Pakistan is facing severe energy crisis and fails to meet demand-supply gap because of insufficient power generation capacity.
