Online advestising : Guiding or Misguiding customer ? er. i) Introduction :-Thesis statement: Online advertisements have both negative and positive impacts on customes However, Online advertisments misguide customers more as compared to guiding them . Using deceptive strategies to promote brands have consumer trust. Incorrect structure 2) How online advernisements can guide or misquide -customers -3) Online advertisements misquide custoners (Thesis) Ads glorify products by exaggerating their benefits. Bait and switch strategy is used to attract astomers. Influencers usually glorify fradulent products and opportunities d) some brands use deceptive pricing techniques of offering discounts without revealing hidden takes e) Emotional appeals are used to manipulate customers 4) Guiding role of online advertisements (Antithesis Online ads provide detailed information that helps customers make informed accounts. b) Customers have access to multiple options and can compare products to make right choices Online advertisements have helped people get opportunities c) because ads reach a vast audience

Customers can read reviews about the products. Some add address real concerns_ 6 Be more specific 5) Misguiding customers via Online advertisements is more common than guiding (Synthesis) over use of buzz words live organic" and "natural" mislead customer choices. Ads use misleading visuals and deceive the customers. 6) The ratio of fradulent promotions is higher as compared to legitimate ones d) Testimonials and reviews are fake most of the times. e) The line between quine genuine concerns and manipulation is thin. Conclusion -

Once Prophet Muhammad /S. A. W. Was passing through the marketplace of Madine. He saw a merchant selling grains. Then Prophet Muhammad (SA.W.W) put his hand in the heap of grains, He discovered that grains on the top of heap were dry whereas, grains beneath the top layer were were the (S. A. W. W) said to the merchant on this act that " He who cheats is not one of the." This shows that honesty is the first thing which matters when it comes to doing bussiness Nowadays, with the increasing trend of Internet of things (10Ts) various brands and bussinesses are relying on online advertisements to sell their products and services. Online advertisements have both negative and positive impacts on customers. However, online advertisements misguide customers more as compared to guiding them Using deceptive strategies to promote brands have with mer trust. Online advertisements usually glorify the benefits of products, use bait and switch' strategy, influencer's promote fake brands and products and use deceptive pricing techniques to carn a project. In addition to this, emotional appeals are effectively used by the brands to attract customers. On the other hand, online advertisements are helpful as well in some ways as they provide detailed information of products, provide customers with multiple options, and have helped some people to get job opportunities sustomers can read miews about products to make informed decisions. Also, some ads address real concerns of people. However, overuse of buzz words, misleading visuals, fake reviews have heightened the risks of scams as compared to be its

Online advertisement encompases use of social medice websites, ToV ads to promote bussinesses and products. These advertisements -are used to attract customers. Adv perform both the guiding and misguiding role. sell the product various ads usually portray the product as most efficient than other products of same categor while stating misleading facts. Contrary to this, these ads educate customers also about the new technologies -and advergements in various sectors.

Exaggerating benefits is one of the most common strategy adopted by the brands to sell produces Puffery is a strategy which is legal in most countries. This strategy allows brands to use various hyperboles to sell products but this is being excessively used to glorify the products and making fake claims for instance, in cosmatics industry it is very ver common to sell the products by overstating the benefits this and lovely is a exam whitening ceam which is porbayed in ads as to m a magic creater claims are made that it can hake the complextion of a person fair in few weeks received do buy these products. The agends of such ads to attract customers and make money

Bait and Switch strategy is also followed many brands of cosmatic, textile and electronics industry. To attract customer's sale is the most efficient mean. Brands use this strategy and offer lucrative discounts to customer but when a customer opens the website to check products, the products with discounts appear to be sold out. Instead

of the discounted products similar products with higher price and exaggerated benefits appear in the product est. Composition Commission of Paliestan (CCP) issued a press release in July 2024 in which 27 brands offering flat discounts were named . They offered flat discounts that didn't apply to all products

Social media is widely used by the people all accross the glober it Social media influencers, which are followed by a large number of people, us using glorify fradulent products and opportunities the influencers on the social media handles promote brands do paid promotions. This comes under influencer marketing, its influencers get paid for promotions, they usually don't check the effectiveness of products or validity of products. In Pakistan. vanous people fell in the trap of company named "Forever living", which took investments from people to provide them daily paid tasks. This company scammed alot of your students and other people but was promoted by the influencers. This shows, influencers don't varify the opportunities instead promote them for money.

Some brands use deceptive pricing techniques by offening discounts without revealing hidden taxes. In tartile industry, clothing brands usually use this stategy. They luse the customers by providing discounts but when a coustomer checks out, various additional taxes and shipping charges are added. Apart from this, some renowend brands usually increase the price of products

few days prior to offering sale or discounts and then sell the products on the original prices wer announcing it as discounted pie.

Using emotional appeals to sell products is again a widely followed strategy to my ad that is on ToV, boial media platforms, and websites websites do have a story attachest to it to make an emotional connection with people for instance, a fizzy drink comapany coca Cola's tag line is "Coca Cola opens Happiners". Now, this tag line leaves an impact on people that during their hoppy mements such as parties, withday celebrations, and armiversaries etc they have to make this drink part of their celebrations similarly, various other brands use the strategy to connect to people and people do buy the products watching such as inwordingto Global web tota, 71% people buy products bassed on social media ads.

Online advertisements do have a quiding role as well. It helps people to make informed decisions soo.

Online ads provide detailed information of the products that helps customers to make informed decisions. The ads usually do enlist the salient features of products which help customer take a better decision. For instance, when it comes to dothing ads. discription is provided about the size, material and texture of dothe Instead of going to a store and check dothes one by one, people have this ease becaus to stay at home

and read the discription of product and order the product. In Pakislan the online share of Apparel retail market is 37.6%. will increase by an average of 10.6 to 56% by 2028.

Online advertisements also provide an opportunity to customers to compare the products to make right and es. When a person by is something through online plateform, he has the opportunity to compare the products with other brands as well. This is applicable to any industry. For example, for buying electronic or gagets one can compare the products of various brands by looking at their online ads instead of moving from store to another store to check the products.

Online advertisements have also helped people get opportunities because ads reach a vast audience. According to Pakistan Tele communication Authority / PTA), 87 35 million Internet users are present, (2023). This shows that social media and other platforms have a reach to larger audience. Plateforms like Rozee. pk, Mustakbil. com, and Bay rozgar. com offer the services of job posting and searching for f a job is also possible. Such plateforms help people get Autording to Oxford economics, ben Z would make up 30%. of global workforce of 2030 Generation Z mostaly mostly use social media plategorms to search for opportunities. In this way, online advertisements are benefil too for people.

Customers can read reviews about products when they shop from any online store or plateform. This is an advantage of online advertisement as reading the reviews before buying a product can allow the austomers to make right decision. Online plateforms like Darazrand A mazon are widely used by the people to o for These two plateforms have the option of reading reviews about the product before confirming Drder This is beneficial as this is available for online plateforms only. When people buy buy products from markets they don't get the opportunity of reading reviews other of other people who have already purchased the same produce

Some online advertisements also address the genuine concerns of people These advertisements educate people in real sense. During covid-19, various govert government sponsered ats ads were played on ToV an channels and other social media plateforms. These ads were educating people about social distancing and other preventive and corrective measures to protect themselves from the virie Apart from this, ads like displaying the use of technology for medical purpose also educate people. These ads vary in range from using robotic gloves for physiotherapy purpose to using various supplements for nutrition purposes.

Eventhough online advertisements have some benefits by the misguiding customers via online advertisements out manewour out manesver than guiding customers.

Dnline adds do provide detailed information about products but most of the times information is not true. Instead buzz words such as "organic" and "natural" mislead customers. In cosmetics, food and drinks ads. the word organic is widely used. The works like organic, natural, number one catch the attention of customers but in reality products usually don't use organic. ingredients: Saeed ghani is one the Pakistani brants which sell products naming them as organic But in reality it use various chemicals for the production of skincare products.

Despite the fact that people do have options when it comes to online advertisements and they can compare and contrast various options, a common dejeptive strategy is adopted by brands where they display one thing, but when the customer recieves the same thing it usually vary in size and sometimes used products are deliered too. This makes a confusion and trusting any company becomes difficult Mislearing visuals an too used when in food ads. Howertisements display more tempting food than the one which a person or der. Ordered products usually good usually vary in proportion and quantity 100.

Online advertisements help peopleto find opportunities but these opportunities are very less as compared to fake ads for work opportunities. In Pakistan, there have a surge in fair work opportunities over the past for years. Online tuitioning, assignment writing and marketing works Federal Invastigation Agency (FIA), 2018-2022 2022 cyber crime report tells that there have been a surge in seven types of abercrimes among which online scams for work is a common one Apart from this a study " stay secure Pakistan" by VISA reveals that 52%. people reported that they were the victim of online scams in the year 2023

Another point of concern is that the line between genuine concerns and manipulation is very thin Some advertisements portray as the are portrayed as genuine issues inste whereas, in reality those advertisements don't talk about the serious concerns. One such example is the promotion of e-cigarate and vapes over the traditionally used igarettes e- agaiettes are not less harmful they have the equal damaging effects as the other agarettes have. As of 2024, e- agaretter market size in Pakistan is 77.2 million dollars Vaping epidemic amony youth, Muhammad Andul gadeer Therefore, The ads promoting 'e - cigarettes don't address the real concerne instead are manipulating yong people.

To sum up the argument, mine advertisements misquide customere tventhough, online advertisements have both negative and jositive impacts on austoniers. Online advertisements misquide customers more as compared to guiding them Using deceptive strategies to promote brands harm customer trust So, with the help of regulations to govern e-commerce and strict Implementation of laws, Pakistan can earn atot of revenue from online advertisements

Concluding paragraph should be comprehensive It is too precise
