

There is an enemy beneath our feet - an enemy more deadly for his complete impartiality. He recognizes no national boundaries, no political parties. Everyone in the world is threatened by him. The enemy is the earth itself. When an earthquake strikes, the world trembles. The power of a quake is greater than anything man himself can produce. But today scientists are directing a great deal of their effort into finding some way of combating earthquakes, and it is possible that at some time in the near future mankind will have discovered a means of protecting itself from earthquakes. An earthquake strikes without warning. When it does, its power is immense. If it strikes a modern city, the damage it causes is

The screenshot shows the Microsoft Word ribbon with three tabs: Font, Paragraph, and Styles. The Font tab is active, displaying options for font face (Calibri), size (36), bold, italic, underline, strikethrough, text color, and background color. The Paragraph tab shows options for bullet points, numbered lists, decrease/increase indent, and text alignment. The Styles tab shows various styles including Normal, No Spacing, Heading 1, Heading 2, Title, Subtitle, Subtle Emphasis, Emphasis, Intense Emphasis, Strong, and Quote. The 'Normal' style is currently selected.

as great as if it has struck a primitive village. Gas mains burst, explosions are caused and fires are started. Underground railways are wrecked. Buildings collapse, bridges fall, dams burst, gaping crevices appear in busy streets. If the quake strikes at sea, huge tidal waves sweep inland. If it strikes in mountain regions, avalanches roar down into the valley. Consider the terrifying statistics from the past 1755: Lisbon, capital of Portugal - the city destroyed entirely and 450 killed. 1970: Peru: 50,000 killed. In 1968 an earthquake struck Alaska. As this is a relatively underpopulated part, only a few people were killed. But it is likely that this was one of the most powerful quakes ever to have hit the world. Geologists estimate that during the tremors, the whole of the state moved over 80 feet farther west into the Pacific Ocean. Imagine the power of something that can move an entire subcontinent! This is the problem that the scientists face. They are dealing with forces so immense that man cannot hope to resist them. All that can be done is to try to pinpoint just where the earthquake will strike and work from there. At least some precautionary measures can then be taken to save lives and some of the property. (Final Precise)

Earthquake

Earthquake is such a destructive enemy of mankind that distinguishes nothing which comes in its way. Due to its destructive power, mankind is trying to find different possible ways to tackle it. Besides, its unchallengable force, unpredictability has caused maximum damage to mankind as entire cities are collapsed that led to massive killings of lives and destruction of infrastructure in general, ~~history~~ has witnessed. Only possible way to cope with it is to find out a pinpoint location where upcoming quake will strike so that precautions can be taken to make it least destructive.
