Brain storming:-

Climate change: Cause and consequences

Work on clear understanding of the topic

Improve your basics about the language

Naveed
Answer
73

Introduction:

7/11/2021

Thesis statement:-

Climate is the average rise in temperature or change in weather. In the Special

UN Security Council Ex-PM highlighted

~~The world country about climate change causes and consequences. The causes~~

of that ~~is~~ either ~~by~~ natural or man-made which ~~is~~ are volcanic eruption, ocean currents, earth orbital and solar variation. Same way

~~Human is causing by Greenhouse gases, Deforestation, Industrial fuels and Decay~~

~~of fossil. However all causes is~~ ~~directly and indirectly has consequences.~~

~~It has major effect rise in temperatures, Acidity of water, Decline in Greenhouse loading.~~

~~While global declining Aqua-animals. Recently noticed events is Drought, humidity and~~

~~melting of glaciers. The all causes is~~

~~majorly affecting human life. But human is God unique creation who will try a good control on it.~~

Weak foundation

According to "big bang theory" when universe ~~come~~ ^{came} into being temperature was high. After while decrease in temperature creating solar system. ~~climat change is theoritically~~
~~from different theory. It mean the rise and fall of temperature is universal. But many factor~~ ~~invole in it.~~ Nature has different event in day and night. Nature and earths still temperature and collosive proces like a volcanic eruption when many gases is enclosed in high temperature isolated rocky environment. There is a massive ~~Explosive chemical release~~ and cause volcanic eruption. The nature does all major change in temperature which emerg ~~Lava volcanic eruption~~ increase the pressure and temperature in the environment. Rise in temperature gives activation energy to different gasses and produces the ocean current in nearest environment.
