

of the body. It affects the liver, it weakens the mental powers, and lessens the general energy of the body.

8. The great advantage of early rising is the good start it gives us in our day's work. The early riser has done a large amount of hard work before other men have got out of bed. In the early morning the mind is fresh, and there are few sounds or other distractions, so that work done at that time is generally well done. In many cases the early riser also finds time to take some exercise in the fresh morning air, and this exercise supplies him with a fund of energy that will last until the evening. By beginning so early, he knows that he has plenty of time to do thoroughly all the work he can be expected to do, and is not tempted to hurry over any part of it. All his work being finished in good time, he has a long interval of rest in the evening before the timely hour when he goes to bed. He gets to sleep several hours before midnight, at the time when sleep is most refreshing and after a sound night's rest, rises early next morning in good health and spirits for the labours of a new day.

It is very plain that such a life as this is far more conducive to health than that of the man who shortens his waking hours by rising late, and so can afford in the course of the day little leisure for necessary rest. Any one who lies in bed late, must, if he wishes to do a full day's work, go on working to a correspondingly late hour, and deny himself the hour or two of evening exercise that he ought to take for the benefit of his health. But, in spite of all his efforts, he will probably produce as good results as the early riser, because he misses the best working hours of the day.

It may be objected to this that some find the perfect quiet of midnight by far the best time for working. This is no doubt true in certain cases. Several great thinkers have found by experience that their intellect is clearest, and they can write best, when they burn the midnight oil. But even in such cases the practice of working late at night cannot be commended. Few men, if any, can exert the full power of their intellect at the time when nature prescribes sleep, without ruining their health thereby; and of course the injury done to the health must in the long run have a bad effect on the quality of the work done.

Advantages of early rising in comparison to late rising

Although the sentence is grammatically correct, one should write simple sentences which are not too long.

Benefits of waking up early ^{include} quality beginning of the day with clear mind, less diversions, ^c Completing a lot of work timely, having enough time for exercise and finding huge time for the designated work and for rest also, which is followed by reviving sleep early at night that makes them an early bird for the next day. Habit of early rising is very beneficial for health in terms of exercise and rest ^{compared} to the one who gets up late. A person who wakes up late, despite putting in all the efforts until midnight, can hardly gain those advantages of early rising. Many people even some intellectuals prefer working at midnight and find this time more productive. Even then this habit is not praiseworthy because it is merely impossible to utilize midnight productively without effecting their health and ultimately effecting the quality of work.
