

# HEALTHCARE DELIVERY IN PAKISTAN.

Pakistan ~~in spite of~~ is still vulnerable to communicable diseases. According to National TB Plan 2024-2026, Pakistan has to cure 5,28,600 yearly till 2026, Pakistan is still suffering from much diseases even if it is curable. Federal Health Secretary stated that almost 6,00,000 cases are registered yearly from last two decades. The major causes are lack of awareness, late diagnosis and incomplete treatment. Women are more victim of this as social mores hampers their access to health services. Lack of political competency and coherent policy are other major issues. Recently \$285 bn are funded to Pakistan for 2024-26. Hence, to wipe out the TB from Pakistan, awareness campaigns <sup>should be initiated to</sup> highlighting the issues for not completing the treatment. The improve <sup>with</sup> facilities, in marginalized areas can also help to deal with TB.
