5) Conclusion.

good use your imagination in your writing

Imagine a world where diseases are diagnosed in seconds, food is produced with minimal waste and even the most remote communities have access to world class education. Thanks to groundbreaking human inventions, this is no longer a distant dream - it's becoming a reality. From life-saving medical technology to sustainable farming practices, it has changed the dynamics of traditional practices. This highlights how human invention has progressed the societies toward success and prosperity. Introduction of E-voting has resulted in transparency and effectiveness of democratic principles. Amidst the expanding human population, the demand of food, education and health has seen a sharp rise, that makes the human inventions more essential than ever. Inception of precision farming, online classes and Telebc are some of its product. The world has advanced with Industrial revolution that ousted the outdated practices of chain of operation through assembly lines and supply chain. Conversely, some argue that human inventions are criticized in moving societies backward. The Industrial revolution has

~~Resulting~~ in labour exploitation by forcing them to work in an unsafe environment and conditions. The advancement of technology has seen an escalation in more sophisticated crimes in the society, by creating disintegration and spreading of disinformation. However, from the first wheel to artificial intelligence, human inventions have transformed societies in a way we never thought before. Initiatives like Labour voice and Whomadeyourclothes campaign guarantees labour rights. As far the matter of crime concerned, Fraud detection System utilizes by banks to curb corruption and money laundering. Lastly, market competitiveness has enhanced the business practices by making it accessible and affordable.
