

Q.7

Topic: Artificial Intelligence: The Death of Creativity

Thesis Statement:

Artificial Intelligence (AI) made the human race sluggish and lazy in the various domains of life. However, AI is consuming the human resources in multiple dimensions.

1) Introduction

U can also write thesis statement under introduction

2) How Artificial Intelligence is the death of Creativity?

Has discouraged

a) AI has hindered creativity in the formal academic discipline.

Good effort

b) AI has deteriorated human creativity the field of Art.

c) AI has completely taken over the field of...

d) AI is more risky for the beginners in E-commerce.

Avoid repeating ideas

e) AI declined the creativity in the field of Agriculture.

f) AI reduced the ability to understand the human emotions.

g) AI has ended the creativity in the common observation of people.

How AI is promoting Creativity and facilitating the human race in further exploration?

a) AI is saving the precious time, energy and resources of the people.

b) AI has advanced and amplified the field of education.

c) AI is creatively exploring the space with success.

(3)

d) Auto function in the AI Creativity
reduced danger and risk managed.

e) AI Creatively stabilized politics
through EVMs.

How to make AI more beneficial and
human ^{Creativ.} risk reduced ^{priority}
More advanced

4) How to make AI more ~~at~~ to
Promote the human creativity.

a) During programming due ~~can~~
~~should~~
~~creativity~~

b) Limit the use ~~it~~ only to
repetative, monotonous and boring
activities.

c) Internationally recognized
principles and laws about AI
restrained are the need of the hour.

d) New softwares in academic is

to catch ~~at~~ AI plagiarism.

e) Introduce AI courses in academic to make well aware the new generation about the risk of AI.

5) Conclusion

Sorry for delayed evaluation

Before, the 21st century people were using herbs for treatment, horses and donkeys for transportation and physical replacement for remote job. With the advent of technology, general and Artificial Intelligence in specific has transformed and the human ~~is~~ limited the human Creativity. It has brought the human Creativity into the brink of death in the fields of education, art and film industry. Students solve their assignments and researches through AI different tools and claim to be their own work. In the field of art, it makes draft, diagrams and programmes through a single click and ~~ruled~~ the human race and their mental Creativity. However, AI has assisted the human race in the various fields such as; formulate academics, space exploration, saving the precious time, resources and energies of the people. Some critics believe that, these are not thought, there is

the ~~the~~ need of more effort to make it more creatively boosting up and human beneficial oriented. To deduce, AI has ^{been} gradually reducing the human creativity in the various field of life in one way or another.

Tru to create some link

AI has brought human creativity into the brinks of it end in the field of formal academic. Students use ChatGPT, Meta AI and other AI advance tools to solve their daily assignments and their research papers. They do not visit practically to the sites for conducting surveys and data analysis and collecting.

All the required data available to them by a single click without moving a single step.

then these students will not be able to face complexities in their practical life through a creative way. According to bloomsberg report, 2023 that 70% students write

Pls work on your grammar

Date: _____

more fictitious the film industry.

In the film industry, fictitious scenes and characters are designed, which has no relation with the practical life. The background of the movies are seen that, the shooting takes place in any other planet than earth. For example, in the "King Kong" movie a fictitious giant character of monkey is made, which defeated hundreds of soldiers firing with machine guns. Moreover, that character developed an affection with a girl and **Without loss of humans precious lives** held her in his one hand. In addition to it, monkey has caught up the helicopter in one hand and thrown with complete force into the ground. Therefore AI declined the creativity of human in film industry and made the film irrelevant to the realities of life. Similarly, AI is more risky for the beginners of traders in the field of E-commerce.

AI deteriorated the creativity of human race in the field of

E-commerce. The beginners in trade set their investment and sell on the cuts with the help of AI. In which they face regular losses without having its proper implications and knowledge.

According to the World of Crypto website that 5mm daily losses committes by the beginners, while applying AI tools on trade without its proper knowledge.

Therefore, AI in the field of e-commerce has reduced the creativity and in fronted the beginners to huge losses on the daily basis. Furthermore, AI has been declining the human creativity in the field of Agriculture.

AI has not been able to observe diseases the crops like human do. AI is unable to measure the variables related to a particular region suitable for certain crops. AI suggests only the cultivation of those crops which are more cost effective. Moreover, using other AI tools in agriculture sector for irrigation

and sprays are unable to detect the sensitivity and occasion of crops for spraying. Contrary to it, AI assisted the farmers in irrigation, sprays, crops rotation and harvesting. As a result human race has shown more reliance on the AI and reduced their creativity. Furthermore, AI reduced the human capabilities to consider the human emotions.

AI is inducted in the fields of Trade, economy, education and medical fields. Many of these fields are directly linked with the human emotions. Where during robotic services they are unable to consider the human emotions. For example, in the medical field there are executing surgeries through AI system based robots. Which are unable to feel the pain and his mental situation and performing operations through a ruthless way. Moreover, human has shifted their focus from the areas, where AI can do the same function. As a result, the human creativity is badly

(11)

is badly affected in one way or another. In addition to it, AI has reduced the human creativity to be a good observer.

AI does not have feelings. As a result, it cannot observe, neither feels neither nor considers the human feeling in a particular situation. For example, if a person needs some assistance in his monotonous work, who is assisted by AI. AI only performs the work, it cannot motivate, encourage and support that individual through communication to make him able to spend his life smiling and comfortably.

In one way AI is eliminating the human creativity, while on the other way AI is promoting creativity and facilitating the human race in further exploration. Some of the fundamental arguments are given in the below paragraphs.

AI is saving the precious time,

resources and energies of the people. Before, the arrival of AI, people were performing their activities in a physical way. For example, the world was I and world was II troops, movements, arms and ammunitions were installed in a large scale. In the arrival of AI, the arrival AI was shifted into remote. Clicking by a single button missiles, drones and antiballistic missiles are activated and hit the targeted areas without the physical marching of military. As a result, AI save the valuable time, resources and energies. Moreover, AI has been playing a very important role in the field of education.

In education AI has assisted the students to save their time, resources and energies. AI perform the same work as performed by the students in a less interval of time. For example, a student was supposed to write

the summary of an article it would take at least 30 minutes to write. But, with the arrival of AI, it writes the summary of the same article within 30 seconds. so, the time reduced from 30 minutes into seconds. If, some student already was deficit of time, so he/she would hire for it to write. As a result, now AI saving time and energies on the side. It is a prominent advantage of the AI in the field of education. Furthermore, AI is creatively exploring the space.

Before, the arrival of AI, it was more risky to send real human being to space missions. Whereby faced the issue of survival. With the arrival of AI, most of the space missions are now have been conducting through the help of AI successfully. Different softwares, tools and cameras are installed in the satellites to direct, navigate and construct

the command center and to move in the space without the fear of losing the life. As a result, satellites move into higher altitude, where they explored new stars, moons and planets. In addition to it, it is on the basis of Auto, which has attenuated high

New cars are invented which drives accord with the help of sensors. It detects another car, wall, human or plants one meter away from its sides. Moreover, it also senses in 5 meters at front the what is moving toward or away from it. Automatic instructions ~~have~~ continuously sends to steering and mould the car accordingly. Which has almost eradicate accidents in the developed countries. In addition to it, with the arrival of AI in the form of Electronic Voting Machines (EVMs) most of the democratic countries are stabilized.

After every election the name of rigging, the opposition parties started

mass congregation and stopped the entire state machinery functionless. While, with the arrival of AI in the form of EVMs has almost stabilized the democracies in India, China and other developed countries including USA. The results are provided instantly after the deadline accurately. Moreover, overseas citizens can also easily cast their votes easily and peacefully without any physical hindrances. Overall with the arrival of AI, it has assisted some human race to promote the creativity in one way or another.

Contrary to it, there are still some deficiencies and need some improvement to boost up further the human creativity. Some of the highlighted suggestions are given below.

First of all during programming any AI tools, the programmer must consider

to ameliorate the creativity rather than to restrained it. He must incorporate the human involvement in critical areas where decisions are made. Because, at the end there is no one to face the consequences except the human. Therefore, programming should be in a way to boost up the creativity.

Secondly, the use of AI should be limited to monotonous, repetitive and boring activities. For example, the packing of product and working with machinery which is high risky and boring one. Similarly, working in the fields like; harvesting, irrigation and fertilization. These are boring and highly energy consuming functions. Moreover, these are the domains where the human creativity not negatively influenced.

Thirdly, there should be internationally ~~laws~~ and recognized laws, rules, regulation and principles

to runs the AI efficiently. As human have certain social regulations in every aspects of life. When, they commit a crime, a criminal processes start against him. Similarly, there should be boundaries determined boundaries and limitations to determined for the AI to keep it in control.

Fourthly, AI in the field of academic played a fruitful role, but it still needs some improvement to boost up the creativity of human being. Most of the students use chat GPT and Meta AI to write their assignments and research papers. So there should be a mechanism through the teachers and professors catch the plagiarism to save and protect the human creativity.

Last, but not the least is that, there should be the induction of AI relevant courses in academic curriculum. Majority of the new generation is using the AI without taking care that how

how much it is harmful for the human creativity? So, they should be made well aware about the advantages and disadvantages about AI. Moreover, they should be made well aware about AI, that it works on the supply of electricity and any fault is possible in it any time. So, one should be prepared creatively, that in case if an AI stop working a person should be ready to start the work again; where it was stopped.

To sum up, it can be ~~deduced that, AI is the death of~~ creativity. Because, AI made the people sluggish and ~~overly~~ ^{Avoid writing in passive} dependent on technology. When ever they need to perform any activity, they use AI such as; in the field of agriculture, education, politics and economy. However, AI has restrained the creativity of human, but some critics claim that the same AI is assisting the human in different aspects

of life. AI is saving the precious time, resources and energies of the people. Moreover, AI has advanced the field of education, space exploration, politics with the inducting of EVMs and reduced the number of accidents with the innovation of self driving cars. ~~There is still the need of improvement to enhanced the human creativity. A programmer must adopt human creativity, these should be universally accepted principles in the domains of AI and last but not the least is to introduce the new softwares and advanced software to catch the plagiarism in the field of education.~~
